

UNIVERSITY of MARYLAND
MEDICAL SYSTEM

A better state of care.

Opening a New Door to Health Care

The new **University of Maryland Laurel
Medical Center** is the first part of a
comprehensive medical campus serving
Laurel and the surrounding communities.

Opening UM Laurel Medical Center is the first step in creating a full-service health care campus in Laurel.

THE NEW UM LAUREL MEDICAL CENTER, at the intersection of Van Dusen and Contee Roads in Laurel, is the first part of a full-service medical community providing outpatient surgery and primary, specialty and emergency care in one convenient location. This new medical community builds on the decades-long tradition of providing outstanding health care.

UM LAUREL MEDICAL CENTER BY THE NUMBERS

- 2 operating rooms
- 20 Emergency Department treatment bays
- 2 procedure rooms
- 4 Emergency Department behavioral health treatment bays
- 2 behavioral health programs
- 10 adult observation, short-stay beds

STEP ONE: UM LAUREL MEDICAL CENTER

The new UM Laurel Medical Center places a heavy emphasis on wellness and preventive care, while still offering outstanding care for acute and chronic health conditions.

To help the community stay healthy, the new UM Laurel Medical Center will provide a full range of outpatient services, including behavioral health, emergency and surgical services, primary care and wound care.

ADVANCED SURGICAL CARE

Thanks to improvements in technologies and surgical approaches, an increasing number of surgeries can now be performed on an outpatient basis. UM Laurel Medical Center will take the next step in the history of health care in Laurel with advanced operating rooms that allow surgeons to perform minimally invasive surgical procedures. These procedures enable patients to go home the same day and have faster recoveries. Patients who need extra time to recover before they can go home will benefit from our observation unit.

UM Laurel Medical Center offers surgical procedures in:

- Breast cancer treatment and reconstruction
- General surgery
- Gynecology
- Orthopedics and sports medicine
- Podiatry
- Urology

A FULL-SERVICE MEDICAL COMMUNITY

- Breast cancer treatment
- Cardiology
- Dialysis
- Full-service imaging
- Maternal-fetal medicine
- Obstetrics and gynecology
- Orthopedic care
- Outpatient surgery
- Pediatric dentistry
- Physical therapy
- Primary care
- Pulmonology and lung health
- Urogynecology

BUILDING ON HISTORY

UM Laurel Medical Center has served the local community for over four decades.

Physicians and specialists at the new UM Laurel Medical Center and the adjacent medical office building, scheduled to open later this year, will build on this history to provide expanded health care services, including:

- Breast cancer treatment
- Cardiology
- Dialysis
- Full-service imaging
- Maternal-fetal medicine
- Obstetrics and gynecology
- Orthopedic care
- Physical therapy
- Primary care
- Pulmonology and lung health
- Urogynecology

EXPANDED EMERGENCY CARE

The new medical center offers expanded emergency medical services in a full-service, 24-hour Emergency Department staffed by emergency medicine physicians. The Emergency Department will have 20 treatment bays and four behavioral health treatment bays.

The new Emergency Department offers:

- Imaging services
- Pathology
- Pharmacy
- Respiratory care
- Short-stay observation

MENTAL HEALTH MATTERS

UM Laurel Medical Center provides outpatient mental health care for many common conditions, including:

- Anxiety disorders
- Bipolar and related disorders
- Depressive disorders
- Psychotic disorders
- Trauma disorders

For patients experiencing a mental health crisis, UM Laurel Medical Center offers two behavioral health programs designed to provide immediate support with the goal of preventing inpatient hospitalizations for psychiatric care.

The partial hospitalization program (PHP) is a structured, time-limited program that delivers intensive therapy five days a week for one to four weeks. Patients receive therapy in individual, group and family sessions, and return home each night to remain connected to their families, friends and community.

The intensive outpatient program (IOP) is a two-to-four week step-down program for PHP patients that provides a smooth transition back into a stable living routine, while still providing structure to reinforce coping skills.

WOUNDS MEET THEIR MATCH

The Wound Center at UM Laurel Medical Center will remain in its current location and continue to provide the same skilled care you have come to expect from UM Laurel Medical Center. The health care providers in the Wound Center are trained to provide traditional therapies, such as sterile dressings and damaged tissue removal, as well as advanced therapies using a hyperbaric chamber, which increases the blood's oxygen levels to speed wound healing and fight infection.

LOOKING AHEAD TO A FULL-SERVICE MEDICAL CARE CAMPUS

Opening the new UM Laurel Medical Center is the first step in creating a full-service medical campus that delivers primary and specialty care, outpatient surgery and more — all in one location. This exciting project is part of University of Maryland Medical System's commitment to deliver outstanding, life-changing care to the residents of Laurel and the surrounding communities.

A better state of care.
