The University of Maryland Children’s Hospital (UMCH) is recognized throughout the Mid-Atlantic region as a valuable resource, providing primary, specialty and critical care for children, from newborns to young adults.

**WE HEAL.** More than 120 full-time faculty physicians care for children as inpatients at the hospital and as outpatients at multiple locations across the state. UMCH physicians and staff excel in combining state-of-the-art medicine with family-centered care.

**WE TEACH.** As part of an academic medical center, clinicians at UMCH ensure that the next generation of pediatricians, pediatric subspecialists and nurses become experts in their fields. We are committed to offering hands-on teaching experiences to students, residents and fellows.

**WE DISCOVER.** Researchers at UMCH are tackling significant global health issues with an emphasis placed on both laboratory and clinical investigations. Research ranges from pioneering malaria vaccines for use in developing countries and flu vaccines for use in the US, to studying pediatric obesity in our local communities.

**WE CARE.** UMCH is here for the families of Maryland. Our mission is to be the hospital of choice for families, children and community physicians who need help in caring for a sick child.

**SPECIALIZED UNITS AND PROGRAMS**

**Pediatric gastroenterologists** diagnose diseases within the entire gastrointestinal tract through the use of a non-invasive camera that patients swallow in pill form, which allows specialists to see inflammation and obstruction inside the body. Conditions like inflammatory bowel disease, which is on the rise in young patients, and celiac disease can then be successfully treated after proper diagnosis.

The **Pediatric Intensive Care Unit (PICU)** has 19 private rooms where children heal from an array of issues, including major surgery, respiratory failure or acute infection.

A team of pediatric critical care experts in the **Pediatric Emergency Department** works around the clock to support children with a range of issues, including infections, organ failure and respiratory disease.

For the youngest and most fragile of patients, diagnosis and care begins in the womb through **advanced fetal care and high-risk obstetrics** at the University of Maryland Medical Center. Newborns who are premature or born with complications receive the **highest level of care in the Drs. Rouben and Violet Jiji Neonatal Intensive Care Unit (NICU)**. They can then be followed by both medical and surgical services to ensure they grow up to be happy, healthy children.

The **Children’s Heart Program** specializes in providing innovative medical, interventional and surgical care for patients with congenital and acquired heart issues from before birth through adulthood.

The Division of **Pediatric Hematology/Oncology** provides the full spectrum of diagnostic and clinical care to patients from birth to age 21 who have cancer or blood diseases. As a member of the Children’s Oncology Group, we share in the commitment to treating and curing childhood cancer. Advanced treatment options include pediatric blood and marrow transplants.

“All the people at the Children’s Hospital took very good care of Camron, and they were helpful to our family while we were there supporting him.”

DEBBIE BAKER, Camron’s grandmother
