

2016

PRINCE GEORGE'S COUNTY

COMMUNITY

HEALTH NEEDS ASSESSMENT

Prepared by:
Prince George's County
Health Department

Rushern L. Baker, III
County Executive

INTRODUCTION

Prince George's County is located in the state of Maryland and borders Montgomery, Howard, Anne Arundel, Calvert and Charles Counties, and Washington, D.C. Home to more than 900,000 diverse residents, the county includes urban, suburban, and rural areas; one out of every five residents in the county are immigrants. The county, while overall considered affluent, has many communities with higher needs and poor health outcomes.

In 2015, the Prince George's County government and Maryland-National Capital Parks and Planning Commission conducted a special study to develop a Primary Healthcare Strategic Plan¹ in preparation for enhancing the healthcare delivery network. A key recommendation from the plan was to “build collaboration among Prince George's County hospitals”, which included conducting a joint community health needs assessment (CHNA) with the Prince George's County Health Department.

CHNA Core Team

Doctors Community Hospital
Fort Washington Medical Center
Laurel Regional Hospital
MedStar Southern Maryland Hospital Center
Prince George's County Health Department
Prince George's Hospital Center

There are five hospitals located within the county: Doctors Community Hospital; Fort Washington Medical Center; Laurel Regional Hospital, MedStar Southern Maryland Hospital Center; and Prince George's Hospital Center. All five hospitals and the Health Department

appointed staff (the core team) to facilitate the CHNA process. The core team began meeting in December 2015 to develop the first inclusive CHNA for the county.

¹ <http://www.pgplanning.org/Resources/Publications/PHSP.htm>

PROCESS OVERVIEW

The CHNA Process was developed to 1) maximize community input, 2) learn from the community experts, 3) utilize existing data, and 4) ensure a comprehensive community prioritization process. The Health Department staff led the CHNA process in developing the data collection tools and analyzing the results with input from the hospital representatives. The process included:

- A community resident survey available in both English and Spanish distributed by the hospitals and health department;
- Secondary data analyses that included the county demographics and population description through socioeconomic indicators, and a comprehensive health indicator profile;
- Hospital Service Profiles to detail the residents served by the core team;
- A community-based organization survey and key informant interviews;
- A comprehensive collection of community resources and assets; and
- An inclusive community prioritization process that included forty representatives from across the county.

While the core team led the data gathering process, there was recognition that there **must be shared ownership of the county's health**. The community data collection strategies and the prioritization process were intentionally developed with this in mind, and set the foundation for community inclusion moving forward. The prioritization process resulted in a community focus on:

- behavioral health,
- metabolic syndrome, and
- cancer,

while acknowledging that any strategies to address these issues in the county would have to include a consideration of the disparate social determinants of health. The results of this process will be used to guide the health department and hospitals in addressing the health needs of the county, with the insight and support of the CHNA participants.

KEY FINDINGS

Drivers of Poor Health Outcomes:

- **Poor social determinants of health drive many of our health disparities.**
 - Poverty, food insecurity, access to healthy food, affordable housing, employment, lack of educational attainment, inadequate financial resources, and a disparate built environment result in poorer health outcomes.
 - Resources may be available in communities with greater needs, but are of poorer quality. For example, a recent study in access to healthy foods in an urban area of the county show that there are many grocery stores, but they lack quality healthy food options.²
- **Access to health insurance through the Affordable Care Act has not helped everyone.**
 - Many residents still lack health insurance (some have not enrolled, some are not eligible).
 - Those with health insurance cannot afford healthcare (co-pays).
- **Residents lack knowledge of or how to use available resources.**
 - The healthcare system is challenging to navigate, and providers and support services need more coordination.
 - There are services available, but they are perceived as underutilized because residents do not know how to locate or use them.
 - Low literacy and low health literacy contribute to poor outcomes.
- **The county does not have enough healthcare providers to serve the residents.**
 - There is a lack of behavioral health providers, dentists, specialists, and primary care providers (also noted in the 2015 Primary Healthcare Strategic Plan for the county³).

² Prince George's County Food System Study, November 2015, <http://www.mncppcapps.org/planning/Publications/PDFs/304/Cover%20page,%20Introduction%20and%20Executive%20summary.pdf>

³ Primary Healthcare Strategic Plan, 2015, <http://www.pgplanning.org/Resources/Publications/PHSP.htm>

-
- There is a lack of providers who accept public insurance.
 - **The county lacks quality healthcare providers.**
 - Surrounding jurisdictions are perceived to have better quality providers.
 - There is a lack of culturally competent and bilingual providers.
 - **Lack of ability to access healthcare providers**
 - There are limited transportation options available, and the supply does not meet the need. There is also a lack of transportation for urgent but non-emergency needs that cannot be scheduled in advance.

Leading Health Challenges

- **Chronic conditions such as heart disease, diabetes, and stroke continue to lead in poor outcomes for many county residents.**
 - Residents have not adopted behaviors that promote good health, such as healthy eating and active living.
 - An estimated two-thirds of residents are obese or overweight.
 - The lack of physical activity and increased obesity is closely related to residents with **metabolic syndrome**⁴, which increases the risk for heart disease, diabetes, and stroke.
- **Behavioral health affects entire families and communities, not just individuals.**
 - The ambulance crews, hospitals, police, and criminal justice system see many residents needing behavioral health services and treatment.
 - The county lacks adequate resources needed to address residents with significant behavioral health issues.
 - The stigma around behavioral health is an ongoing problem in the county.
- **While the trend for many health issues has improved in the county, we still have significant disparities. For example:**

⁴ Metabolic Syndrome is a group of risk factors that raises the risk of heart disease and other health problems such as diabetes and stroke. The risk factors include: a large waist; high triglycerides (fat in the blood); low HDL or “good” cholesterol; high blood pressure, and high blood glucose (sugar). Source: NIH, accessed on 6/1/16, <http://www.nhlbi.nih.gov/health/health-topics/topics/ms>

-
- **Cancer:** By cancer site, Black residents in the county had higher incidence and mortality rates for breast, colorectal, and prostate cancers. However, overall, White non-Hispanic residents had a higher cancer mortality rate (2014).
 - **HIV:** Prince George's County had the second highest rate of HIV diagnoses in the state in 2013, and had the highest number of actual cases in the state.
 - **Asthma:** For adults, Black county residents have an age-adjusted hospitalization rate due to asthma that is more than twice as high as White, non-Hispanic residents (2010-2012).

Recommendations

- **More partnership and collaborative efforts are needed.**
 - Current coordinated efforts in the county were recognized as improving outcomes through care coordination and by addressing systemic issues in the county.
- **More funding and resource for health.**
 - Successful efforts to improve resident health in the county are often limited in scope and effect due to lack of funding. Building public health capacity in the county requires the necessary resources.
 - Funding is needed to strengthen the health safety net and build capacity of local non-profits.
- **Increase community-specific outreach and education**
 - More outreach and education is needed, and should be tailored at a community-level to be culturally sensitive and reach residents.
 - Residents need education about the available resources, and how to utilize and navigate them.

POPULATION PROFILE

Overall Population

From 2000 to 2010, Prince George's County population grew by 7.7% to 863,420. The county is currently on track to surpass the growth of the previous decade with a 6.5% increase in population from 2010 to 2016.

Prince George's County Population, 2000-2016

Data Source: U.S. Census, Annual Population Estimates; * 2016 estimate provided by Claritas

Prince George's County by Race and Ethnicity, 2014

Over three-fourths of the population in the county is comprised of minorities, led by 62.1% Black, Non-Hispanic (NH) followed by the Hispanic population (16.9%). Between 2010 and 2014, the Hispanic population grew the fastest with an 18.3% increase. The Asian population grew by 13.6% and the Black or African American population grew by 2.3%. The White, Non-Hispanic population declined slightly, from 129,668 in 2010 to 128,234 in 2014.

Prince George's County, Median Age by Race and Ethnicity, 2014

Race and Ethnicity	Median Age (yrs.)
White, NH	44.6
Black	38.6
Hispanic, Any Race	28.4
Asian	36.1

Data Source: 2014 American Community Survey 1-Year Estimates, Table B01002

Overall, the demographics of Prince George's County differ from the state of Maryland. While Maryland has a majority White, Non-Hispanic (NH) population, Prince George's County has a majority Black, NH population. Prince George's County also has a higher proportion of Hispanics than the state.

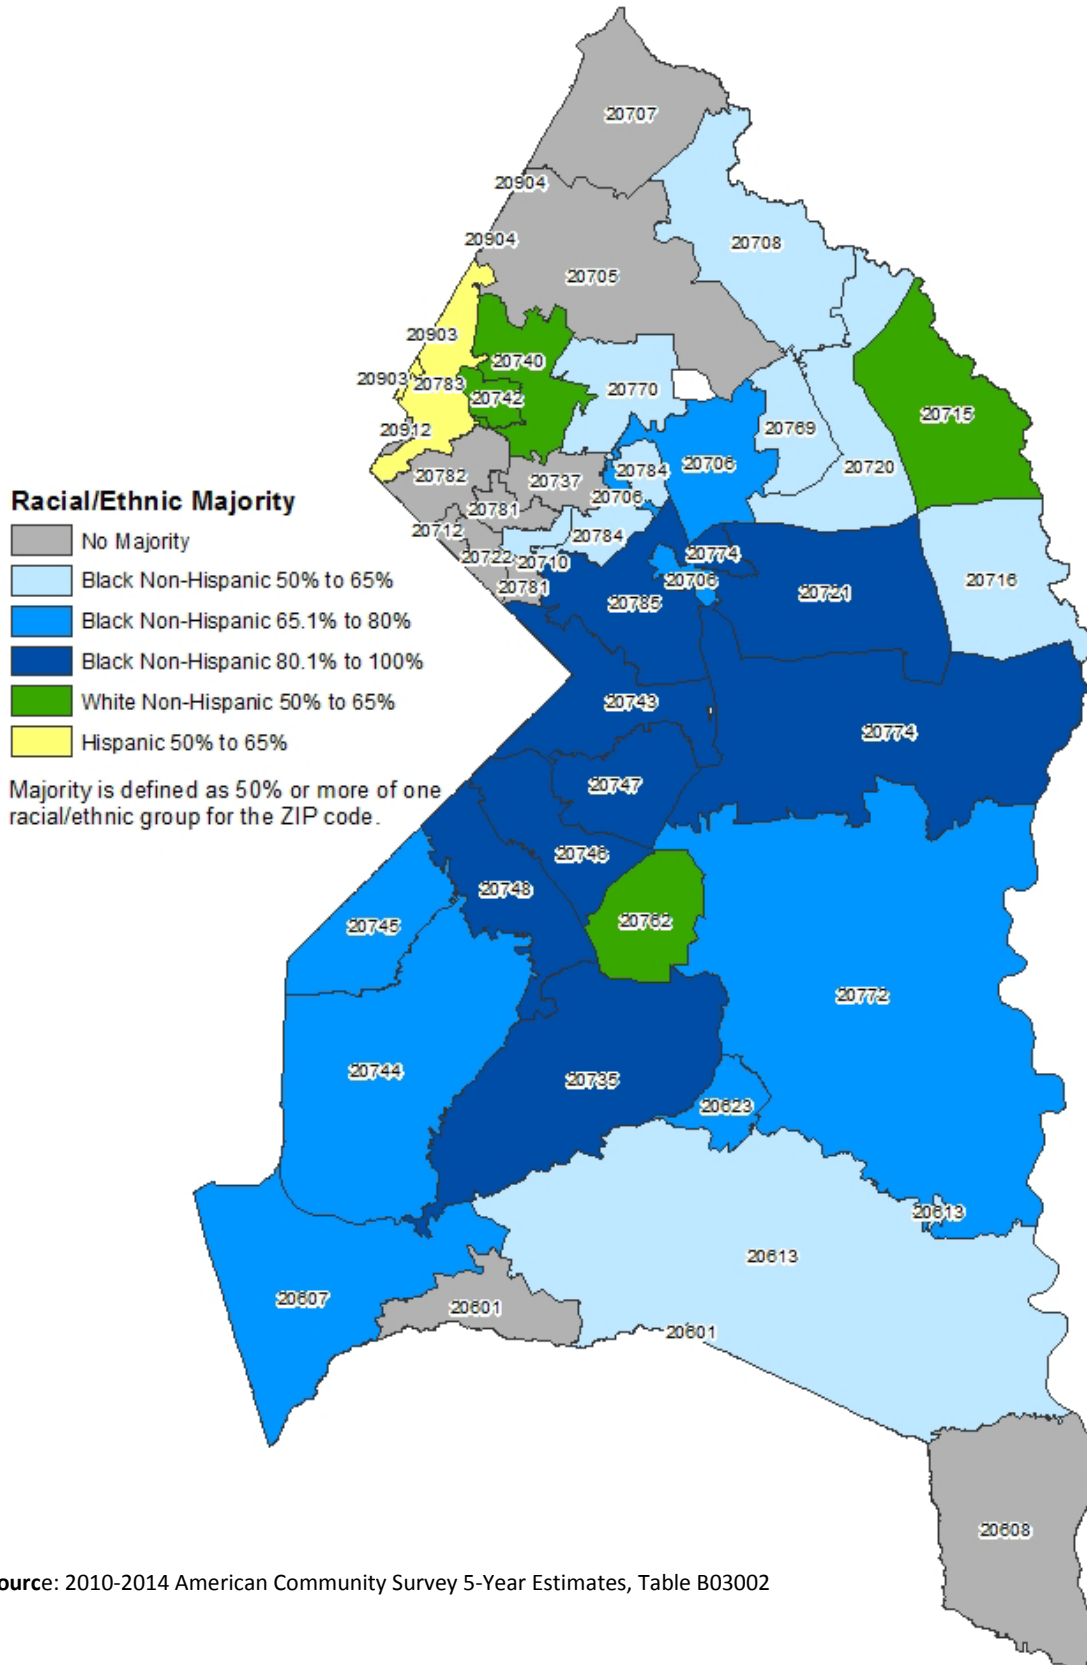

Overall, Prince George's County has a younger population compared to Maryland and the U.S. The median age in the county is 36.1 years, while the state is at 38.3 and the U.S. is at 37.7. This can also be seen by the age groups in Table 1; a larger percent of the County's population is under 45 years of age.

However, there are some variations by race and ethnicity, as demonstrated in Table 2, with the median age of the Hispanic population of 28.4, which is much younger compared to other residents. In contrast, the White, NH population is older, with a median age of 44.6.

By ZIP code, most of the county has a Black, Non-Hispanic majority as seen in Map 1. However, the northern part of the county is more diverse, with no majority population in many areas, and a few ZIP codes with a Hispanic or White, Non-Hispanic majority.

ZIP Codes by Population Racial and Ethnic Majority, Prince George's County, 2010-2014

Data Source: 2010-2014 American Community Survey 5-Year Estimates, Table B03002

Foreign Born Residents

In Prince George's County, 1 out of every 5 residents (21.8%)¹ are born outside the United States. The countries that contribute the most to the foreign-born population include El Salvador, Guatemala, Nigeria, Mexico, and Jamaica: these five countries account for nearly half of the total foreign-born population. Of the nearly 200,000 foreign born residents in the County, 40% are naturalized U.S. citizens with a median household income of \$72,093, compared to \$56,274 for the 60% who are not U.S. citizens.

Country of Origin of Foreign-born Residents,
Prince George's County, 2010-2014

Data Source: 2010-2014 American Community Survey 5-Year Estimates, Table B05006

The majority of county foreign-born residents speak English (33.6%) or Spanish (32.9%). For those that speak languages other than English, 45% report speaking English “very well”; of those who do not speak English well, most (66.2%) are Spanish-speaking², which translates to approximately 47,000 residents.

Poverty

Over 10% of people in Prince George’s County lived in poverty in 2014, which is similar to Maryland at 10.1% and lower than the United States at 15.5%. There are noticeable differences in poverty by gender with more women in poverty than men, and by age with 14% of children living in poverty. Racial and ethnic disparities also exist in the county: approximately 17% of Hispanic and Latino residents live in poverty, compared to 9.3% among the county’s White non-Hispanic population and 8.6% among the county’s Black population. Residents with more education had lower levels of poverty, while those without a high school degree had the highest level of poverty at 15.7%.

Individual Poverty Status in the Past 12 Months, Prince George’s County, 2014 (N=882,402)

Indicators	Prince Georges County		Maryland % Poverty	U.S. % Poverty
	N	% Poverty		
Total individuals in poverty	89,672	10.2%	10.1%	15.5%
Male	39,168	9.2%	9.1%	14.2%
Female	50,504	11.0%	11.1%	9.5%
Age				
Under 18 years	28,051	14.0%	13.0%	21.7%
18 to 64 years	55,609	9.6%	9.6%	14.6%
65 years and over	6,012	6.0%	7.4%	9.5%
Race & Ethnicity				
White, non-Hispanic	11,024	9.3%	6.9%	10.8%
Black	47,902	8.6%	14.6%	27.0%
Asian	3,212	8.6%	9.0%	12.5%
Hispanic (of any race)	25,684	17.1%	14.2%	24.1%

Less than high school	13,596	15.7%	21.3%	27.8%
High school graduate (or equivalent)	14,566	9.3%	11.3%	14.7%
Some college, associate’s degree	11,231	6.6%	7.4%	10.6%
Bachelor’s degree and higher	8,091	4.3%	3.3%	4.7%

Data Source: American Community Survey 1-Year Estimates, 2014, Table S1701

Approximately 7% of families in Prince George’s County live in poverty, which is similar to Maryland at 7.1% and lower than the United States at 11.3%. Fewer married couple families experience poverty (3.4%), but 12.4% of families with a female head of household lived in poverty. This figure increases to 17.6% among single-mother households with children under 18 years of age. Family poverty by race and ethnicity shows a disparity with approximately two times the percent of Hispanic families lived in poverty across the different families types.

Family Poverty Status in the Past 12 Months, 2014

	Prince George's County % Poverty	Maryland % Poverty	United States % Poverty
All families	7.0%	7.1%	11.3%
With related children under 18 years	11.2%	10.8%	18.0%

Food Stamp/Supplemental Nutrition Assistance Program (SNAP) Benefits

Prince George's County had a higher percent of households that received food stamps/SNAP benefits in 2014 (12.4%) compared to Maryland (11.6%), but was lower than the United States at 13.2%. In the County, over half (54.6%) of households receiving food stamps/SNAP include children under 18 years of age. An additional 27.1% of households receiving food stamps/SNAP included people over 60 years of age.

Disability

In 2014, an estimated 9.2% of the County's population lives with a disability. Some disabilities may occur with age, while others may be from birth, or from disease or accident. By race and ethnicity, the White, Non-Hispanic population is estimated to have the highest proportion of County residents with a disability at 12.9%. Over 31% of residents age 65 years and older have a disability; of those approximately two-thirds have an ambulatory disability.

Percent of Residents 25 Years and Older by Education and Race/Ethnicity, Prince George's County, 2014

Data Source: 2014 American Community Survey 1-Year Estimates, Table B15002

While Prince George’s County is similar to the U.S. (see Table 7) for those with Bachelor’s Degrees and higher (31% and 30%), the County falls behind when compared to Maryland (38%). There is more of disparity when comparing the County to the neighboring jurisdiction of Washington, D.C., which has 55% of residents with a Bachelor’s Degree or higher.

There are noticeable differences within the County by race and ethnicity (see Graph 6), with Asian residents having high educational attainment, followed by White, Non-Hispanic (NH) residents. Most Black residents do have a High School Degree, but fewer have a college degree compared to Asian and White, NH residents. The County’s Hispanic residents have the most significant disparity, with over 50% lacking a High School Degree or equivalent, and less than 10% having a Bachelor’s Degree or higher.

In 2015, 127,576 County children and adolescents enrolled in public schools. While the overall graduation rate has increased since 2012 (see Graph 7), Hispanic students are still less likely to complete high school in the County. Overall, Prince George’s County has a lower graduation rate (78.75%) compared to Maryland (86.98%) in 2015. Part of that difference may be due to the graduation rate for Hispanic students in Maryland being over 10 percent higher (76.89% compared to 67.37% for the County).

Employment

In 2014, 9.1% of Prince George's County residents were unemployed, which is higher than both Maryland and the U.S. at 7.2%. The county unemployment rate varies by education, disability status, and by race and Hispanic ethnicity. Overall, one-third of residents age 16 and older living in poverty are unemployed. Unemployment can result in residents being unable to acquire basic resources such as healthy food, housing, transportation, and health care and medication.

Unemployment Rate for Residents 16 Years and Older, 2014

	Prince George's County	Maryland	United States
Population 16 years and older	9.1%	7.2%	7.2%
Below Poverty Level	32.8%	30.5%	25.0%
With Any Disability	17.1%	16.0%	14.9%

Access to Food

Access to healthy food has been shown to increase fruit and vegetable consumption and lower the risk of obesity.³ The presence of a supermarket in a community is a sign health by providing residents with access to affordable and nutritious food. A food desert is an area lacking supermarket access. In the county, most areas designated as food deserts are within the Washington D.C. metro area (inside the beltway). A food desert is defined as a low income area where urban residents are more than one mile away from a supermarket, or suburban residents are more than 10 miles away.

Food Deserts: Low Income and Low Access, Prince George's County, 2010

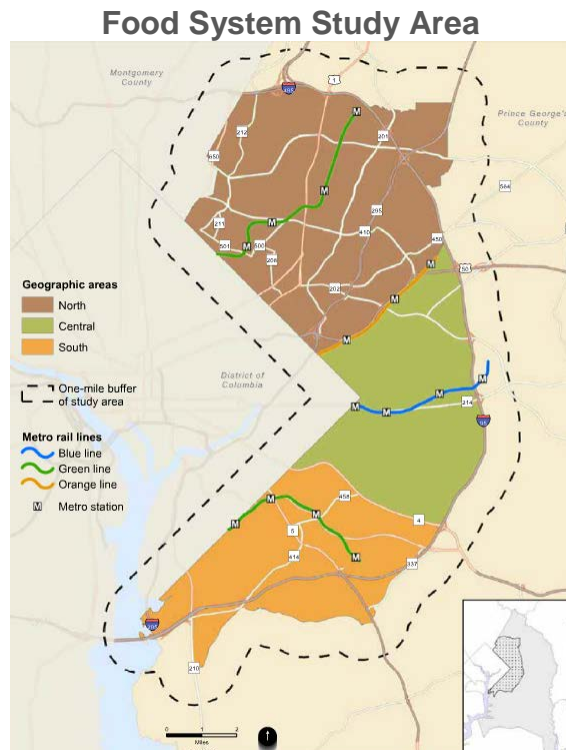

Data Source: United States Department of Agriculture, Economic Research Service, Food Access Research Atlas

Prince George's County Food System Study, 2015

A 2015 food system study of the area of Prince George's County adjacent to Washington, DC, found that many residents had food access challenges "related to the quality of local stores and what they carry than the physical access to food outlets. Many residents do not patronize nearby supermarkets but travel elsewhere, even to other jurisdictions, where more variety and better quality food are sold for less".⁴ This finding was confirmed by a survey of the local food outlets that indicated small markets had limited healthy food alternative available. The study area was noted to have numerous supermarkets, but that the quality and availability of food even within the same retailer varied.

Food Access Challenges

Housing

There are fewer housing vacancies in Prince George's County (7.1%) compared to both Maryland (10.6%) and the U.S. (12.5%). The County has more single-family households (21%) compared to Maryland (14.7%) and the U.S. (13%).⁵ The median value of homes in Prince George's County is \$247,600 which is lower than the overall state (\$280,220) but higher than the national value (\$173,900).⁶

Fair Market Rent

Approximately 40% of occupied housing units in Prince George's County are rentals (Table 8). The estimated median income for renters in the County is \$50,792, which is 30% lower than the overall County median household income of \$72,290. Based on the Fair Market Rent values, affordable housing can be a challenge in the County. When limited income has to be used for rent, these households may affect their ability to purchase other necessities, such as food, transportation and medical expenses. While the rental income in Prince George's County is greater than Maryland, the rental costs are also higher.

Fair Market Rent, 2015

	Prince George's County	Maryland
Fair Market Rent by Unit		
Efficiency	\$1,167	\$936
One bedroom	\$1,230	\$1,049

Rent affordable for households earning the renter median income	\$1,270	\$1,167

Data Source: National Low Income Housing Coalition, www.nlihc.org

Income

The median household income in the County is \$72,290 which is lower than Maryland (\$73,971), but is higher than the U.S. When looking at income by groups (Graph 8), Maryland has more residents making below \$25,000 compared to Prince George's County; however, Maryland also has more residents making above \$150,000 compared to Prince George's County, which helps to explain the higher mean and median income for the state.

Income in the Past 12 Months (In 2014 Inflation-Adjusted Dollars)

	Prince George's County	Maryland	United States
Median household income	\$72,290	\$73,971	\$53,657
Mean household income	\$89,171	\$97,016	\$75,591
Median family income	\$83,167	\$89,678	\$65,910
Mean family income	\$99,201	\$112,887	\$88,394

SocioNeeds Index

The SocioNeeds Index is calculated from several social and economic factors, including poverty and education, that may impact health or access to care. The ZIP codes are ranked based on the index, with 1 being the best ranking, and 5 being the worst. The Index is calculated by Health Communities Institute⁷. The ZIP codes with the highest ranking are concentrated within the D.C. metro area.

HEALTH INDICATORS REPORT

Introduction

The following report includes existing health data for Prince George's County, compiled using the most current local, state, and national sources. This report was developed to inform and support a joint Community Health Needs Assessment for the Health Department and area hospitals, and was used as part of the Prioritization Process that included resident representation from across the county.

Methods

Much of the information in this report is generated through a variety of sources, including: Maryland Health Services Cost Review Commission; Maryland Vital Statistics Annual Reports, Maryland Department of Health and Mental Hygiene's (DHMH) Annual Cancer Reports, Behavioral Risk Factor Surveillance System (BRFSS), Centers for Disease Control and Prevention's CDC WONDER Online Database, Centers for Medicare and Medicaid Services, National Vital Statistics Reports, Maryland SHIP, and the Prince George's County Health Department data website: www.pgchealthzone.org. Some of the data presented, specifically some birth and death data as well as some emergency room and hospitalization data, were analyzed by the Health Department using data files provided by Maryland DHMH. The specific data sources used are listed throughout the report.

When available, state (noted as MD SHIP) and national (noted as HP 2020) comparisons were provided as benchmarks. Most topics were analyzed by gender, race and ethnicity, age group and ZIP Code level to study the burden of health conditions, determinants of health and health disparities.

Limitations

While efforts were made to include accurate and current data, data gaps and limitations exist. One major limitation is that Prince George's County residents sometimes seek services in Washington, D.C.; because this is a different jurisdiction the data for these services may be unavailable (Emergency Room Visits) or older (hospitalizations). Another major limitation is that the diversity of the county is often not captured through traditional race and ethnicity. The county has a large immigrant population, but data specific to this population is often not available related to health issue. Data with small numbers can also be difficult to analyze and interpret and should be viewed carefully. Current events can also affect data, such as the implementation of the Affordable Care Act (ACA). While the ACA has increased health insurance coverage, the data that is needed to fully understand how this has affected our residents is not yet available.

Definitions

Crude Rate - The total number of cases or deaths divided by the total population at risk. Crude rate is generally presented as rate per population of 1,000, 10,000 or 100,000. It is not adjusted for the age, race, ethnicity, sex, or other characteristics of a population.

Age-Adjusted Rate - A rate that is modified to eliminate the effect of different age distributions in the population over time, or between different populations. It is presented as a rate per population of 1,000, 10,000 or 100,000.

Frequency - Often denoted by the symbol “n”, frequency is the number of occurrences of an event.

Health Disparity - Differences in health outcomes or health determinants that are observed between different populations. The terms health disparities and health inequalities are often used interchangeably.

Health People 2020 (HP 2020) – Healthy People 2020 is the nation’s goals and objectives to improve citizens’ health. HP2020 goals are noted throughout the report as a benchmark.

Incidence Rate - A measure of the frequency with which an event, such as a new case of illness, occurs in a population over a period of time.

Infant Mortality Rate - Defined as the number of infant deaths per 1,000 live births per year. Infant is defined as being less than one year of age.

Maryland SHIP (MD SHIP) – Maryland’s State Health Improvement Plan is focused on improving the health of the state; measures for the SHIP areas are included throughout the report as a benchmark.

Prevalence Rate - The proportion of persons in a population who have a particular disease or attribute at a specified point in time (point prevalence) or over a specified period of time (period prevalence).

Racial and Ethnic Groups:

White - A person having origins in any of the original peoples of Europe, the Middle East, or North Africa.

Black or African American - A person having origins in any of the black racial groups of Africa.

Asian - A person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Pakistan, the Philippine Islands, Thailand, Vietnam etc.

American Indian or Alaska Native - A person having origins in any of the original peoples of North and South America (including Central America) and who maintains tribal affiliation or community attachment.

Hispanic or Latino - A person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin regardless of race.

Health Status Indicators

Life Expectancy

Prince George's County has a life expectancy about the same as Maryland and above the U.S. Life expectancy has steadily increased in the county, and the Maryland SHIP Goal of 79.8 years was met as of 2014. However, there is still a disparity in life expectancy by race, with White residents living longer on average than Black residents.

Data Source: Maryland Vital Statistics Annual Report 2014, Maryland Department of Health and Mental Hygiene

Mortality

From 2012-2014, 16,585 deaths occurred to Prince George's County residents. The leading two causes of death in the county, heart disease and cancer, account for half of all resident deaths. Overall, the age-adjusted death rate for the county is higher than Maryland, but lower than the U.S. for 2012-2014. For the leading causes of death, the county's age-adjusted mortality rates are higher than Maryland and the U.S. for heart disease, cancer, stroke, diabetes, septicemia, nephritis, homicide, hypertension, and perinatal conditions.

Leading Causes of Death, 2012-2014

Cause of Death	Prince George's County Deaths		Age-Adjusted Death Rates per 100,000 Population			Healthy People 2020 Target	Maryland SHIP 2017 Goal

Leading Causes of Death for White Non-Hispanic Residents, Prince George's County, 2010-2014 (N=8,462)

*CLRD=Chronic Lower Respiratory Disease, includes both chronic obstructive pulmonary disease and asthma

Data Source: Centers for Disease Control and Prevention, National Center for Health Statistics, CDC WONDER Online Database

Leading Causes of Death for Black Non-Hispanic Residents, Prince George's County, 2010-2014 (N=17,148)

Data Source: Centers for Disease Control and Prevention, National Center for Health Statistics, CDC WONDER Online Database

Leading Causes of Death for Hispanic Residents of Any Race, Prince George's County, 2009-2014 (N=1,014)

Data Source: Centers for Disease Control and Prevention, National Center for Health Statistics, CDC WONDER Online Database

Leading Causes of Death for Asian Non-Hispanic Residents, Prince George's County, 2010-2014 (N=641)

Data Source: Centers for Disease Control and Prevention, National Center for Health Statistics, CDC WONDER Online Database

While the leading cause of death by race and Hispanic ethnicity is consistently heart disease and cancer, there is variation for the remaining causes. For White non-Hispanic (NH), Black NH, and Asian NH residents the third leading cause of death is stroke, but for Hispanic residents it is accidents. Diabetes is a leading cause of death for both Black NH and Asian NH residents, while both perinatal period conditions and homicide are included in the five leading causes of death for Hispanic residents.

Access to Health Care

Access to quality, comprehensive health care services leads to an overall better quality of life through prevention and timely treatment for health issues. The implementation of the Affordable Care Act has resulted in an increase of county residents with health insurance, which is a key component to accessing care; however, the results are still being collected and will be reflected starting in 2015 data. Access to care goes beyond insurance, and includes provider proximity, ability to get an appointment with a medical provider, transportation, and ability to pay co-pays or fees.

Cancer

Overview	
What is it?	Cancer is a term used for diseases in which abnormal cells divide without control and can invade other tissues; there are more than 100 kinds of cancer.
Who is affected?	In 2011, 3,235 residents were diagnosed with cancer in the county, and the cancer incidence rate was 390.0 per 100,000 residents. In 2014, there were 1,417 deaths from cancer in the county, which accounted for one out of every four deaths. Prostate and breast cancer are the most common types of cancer in the county, and in 2011 accounted for 36% of all new cancer cases. Overall, Black residents have the highest age-adjusted rate for new cancer cases, while White non-Hispanic residents have the highest age-adjusted death rate for cancer. By site, lung and bronchus cancer has the highest age-adjusted death rate for county residents, followed by breast cancer.
Prevention and Treatment	<p>According to the CDC, there are several ways to help prevent cancer:</p> <ul style="list-style-type: none"> • Healthy choices can reduce cancer risk, like avoiding tobacco, limiting alcohol use, protecting your skin from the sun and avoiding indoor tanning, eating a diet rich in fruits and vegetables, keeping a healthy weight, and being physically active. • The human papillomavirus (HPV) vaccine helps prevent most cervical cancers and several other kinds of cancer; the hepatitis B vaccine can lower liver cancer risk. • Screening for cervical and colorectal cancers helps prevent these diseases by finding precancerous lesions so they can be treated before they become cancerous. Screening for cervical, colorectal, and breast cancers also helps find these diseases at an early stage, when treatment works best. <p>Cancer treatment can involve surgery, chemotherapy, radiation therapy, targeted therapy, and immunotherapy.</p>
What are the outcomes?	Remission (no cancer signs or symptoms); long-term treatment and care; death.
Disparity	Overall, men had a higher age-adjusted cancer incidence rate per 100,000 (475.5) than women (333.1), and Black residents had a higher rate (393.4) compared to White and Asian residents in 2011. In 2014, men had a higher cancer mortality rate at 199.4 compared to women (149.6), and White non-Hispanic (NH) residents had a higher mortality rate (208.3) compared to Black NH residents (167.7). By cancer site, Black residents in the county had higher incidence and mortality rates for breast, colorectal, and prostate cancers.
How do we compare?	Prince George's County 2011 age-adjusted cancer incidence rate was 390.0 per 100,000 residents, much lower than the state at 440.7; other Maryland counties range from 387.4 to 553.7 (2014 MD Cancer Report). The age-adjusted death rate for the county from 2012-2014 was 166.4, compared to Maryland at 163.3 with a range of 121.7 to 208.5 across Maryland counties. The county is similar to the state for cancer screening.

Overall, Prince George’s County Age-Adjusted Cancer Incidence Rate is less than Maryland and the U.S, and for most leading types of cancer. An exception to this is Prostate Cancer with a county rate of 180.4 compared to Maryland at 148.7 and the nation at 143.6.

Cancer Screening

In 2014, Prince George's County had slightly higher cancer screening rates compared to the state and nation for prostate, colorectal, and breast cancers, and slightly lower screening rates for cervical cancer.

Men (40 years+) With a Prostate-Specific Antigen Test in the Past Two Years, 2014

Data Source: 2014 Maryland BRFSS, DHMH; CDC National Center for Chronic Disease Prevention Health Promotion, Division of Public Health, BRFSS

Men and Women (50 years+) who ever had a Colorectal Cancer Screening, 2014

Data Source: 2014 Maryland BRFSS, DHMH; CDC National Center for Chronic Disease Prevention Health Promotion, Division of Public Health, BRFSS

Women (50 years+) who had a Mammography in the Past 2 Years, 2014

Data Source: 2014 Maryland BRFSS, DHMH; CDC National Center for Chronic Disease Prevention Health Promotion, Division of Public Health, BRFSS

Women (18 years+) who had a Pap Smear in the Past Three Years, 2014

Data Source: 2014 Maryland BRFSS, DHMH; CDC National Center for Chronic Disease Prevention Health Promotion, Division of Public Health, BRFSS

Cancer screening is important to find cancers early, when treatment is likely to work best. Many Prince George’s County residents do not receive the recommended cancer screenings, which can result in cancer that progresses before it is detected.

Population Not Screened for Selected Cancer, Prince George’s County, 2014

Cancer Screening	Target Group	Total Population	Percentage not Screened	Estimated Population not Screened
Prostate Specific Antigen (PSA) in past 2 years	Men 40 years and above	183,641	51.0%	93,657
Colorectal Cancer Screening	Men and women 50 years and above	277,992	25.3%	70,332

Chronic Lower Respiratory Disease (CLRD)

CLRD are diseases that affect the lungs, which includes COPD (chronic obstructive pulmonary disease) and asthma. COPD consists of emphysema which means the air sacs in the lungs are damaged, and chronic bronchitis where the lining of the lungs are red and swollen and become clogged with mucus. Cigarette smoking is the main cause of COPD, and is strongly associated with lung cancer. Asthma is a disease that also affects the lungs that is commonly is diagnosed in childhood. Asthma is described further below:

Asthma Overview	
What is it?	Asthma is a chronic disease involving the airways that allow air to come in and out of the lungs. Asthma causes airways to always be inflamed; they become even more swollen and the airway muscles can tighten when something triggers your symptoms: coughing, wheezing, and shortness of breath.
Who is affected?	14.3% (99,459) of adults are estimated to have asthma (MD 2014 BRFSS) and 13.9% (33,294) of children are estimated to have asthma (MD 2013 BRFSS).
Prevention and Treatment	Asthma cannot be prevented and there is no cure, but steps can be taken to control the disease and prevent symptoms: use medicines as your doctor prescribes and try to avoid triggers that make asthma worse. (NHLBI.NIH.gov; AAAAI.org)
What are the outcomes?	People with asthma are at risk of developing complications from respiratory infections like influenza and pneumonia. Asthma complications can be severe and include decreased ability to exercise, lack of sleep, permanent changes in lung function, persistent cough, trouble breathing, and death (NIH.gov).
Disparity	16.7% of Black, non-Hispanic (NH) adults are estimated to have asthma compared to 10.0% of White, NH adults. More females (18.5%) than males (9.6%) are estimated to have asthma and females have a higher rate of Emergency Department visits due to asthma. More younger adults are estimated to have asthma (16.2%) compared to adults ages 45 to 64 (11.4%) and 65 and older (13.1%). (2014 MD BRFSS). For adults, Black, NH county residents have an age-adjusted hospitalization rate due to asthma that is more than twice as high as White, NH residents. For children, American Indian and Alaskan Native residents have the highest age-adjusted hospitalization rate per 100,000 (33.6) followed by Black NH (18.5). Higher hospitalization rates are mostly concentrated around the Washington, D.C. border.
How do we compare?	While 14.3% of adult county residents have asthma, other Maryland counties range from 9.3% to 24.1%; the state overall is 13.5% (2014 MD BRFSS) and the U.S. is at 13.8% (BRFSS). Maryland has a slightly higher rate of Emergency Department visits due to asthma (ED visits to Washington D.C. are not included, which could affect county estimates).

Diabetes

Overview	
What is it?	Diabetes is a condition in which the body either doesn't make enough of a hormone called insulin or can't use its own insulin, which is needed to process glucose (sugar) (Source: CDC).
Who is affected?	11.5% (78,525) of adults in the county are estimated to have diabetes, with an additional 71,065 with prediabetes. (2014 MD BRFSS). In 2014, 245 county residents died from diabetes.
Prevention and Treatment	<ul style="list-style-type: none"> • Diabetes can be prevented or delayed by losing a small amount of weight (5 to 7 percent of total body weight) through 30 minutes of physical activity 5 days a week and healthier eating. (Source: CDC Diabetes Prevention Program) • The goals of diabetes treatment are to control blood glucose levels and prevent diabetes complications by focusing on: nutrition, physical activity, and medication. (source: Joslin Diabetes Center)
What are the outcomes?	Complications from diabetes include: heart disease, kidney failure, lower-extremity amputation, and death
Disparity	13.7% of White, non-Hispanic (NH) and 13.4% of Black NH residents are estimated to have diabetes; Black NH residents have a higher age-adjusted death rate due to diabetes compared to White NH residents. More women (12.5%) are estimated to have diabetes compared to men (10.4%), but men have a higher rate of Emergency Department visits due to diabetes. Over one-third of residents aged 65+ (35.8%), and 13.8% of adults ages 45-64 are estimated to have diabetes. (2014 MD BRFSS).
How do we compare?	While 11.5% of county residents have diabetes, other Maryland counties range from 6.2% to 18.2%; the state overall is 10.2% (2014 MD BRFSS), and the U.S. is at 10.0% (BRFSS). Prince George's County has a much higher rate of deaths due to diabetes compared to the state.

Heart Disease

Overview	
What is it?	Heart Disease is a disorder of the blood vessels of the heart that can lead to a heart attack, which happens when an artery becomes blocked. Heart Disease is one of several cardiovascular diseases.
Who is affected?	Heart disease is a leading cause of death in the county with an age-adjusted death rate of 185.8 per 100,000 population in 2014. Heart disease accounted for 1,300 or 24% of deaths in the county in 2014.
Prevention and Treatment	<ul style="list-style-type: none"> • Eating a healthy diet, maintaining a healthy weight, getting enough physical activity, not smoking, and limiting alcohol use can lower the risk of heart disease. (Source: CDC). • The goals of heart disease treatment is to control high blood pressure and high cholesterol by focusing on: eating healthier, increasing physical activity, quitting smoking, medication, and surgical procedures. (Source: CDC).
What are the outcomes?	Complications of heart disease include: heart failure, heart attack, stroke, aneurysm, peripheral artery disease, and sudden cardiac arrest.
Disparity	Men have a higher rate of Emergency Department (ED) visits for Heart Disease than women, and more men die from heart disease. Black non-Hispanic residents have a higher rate of Emergency Department visits for Heart Disease, but White, non-Hispanic residents have a higher mortality rate (White non-Hispanic men have the highest mortality rate at 250.1 per 100,000 in 2012-2014). Residents 65 years of age and older account for 45% of Heart Disease ED visits.
How do we compare?	The age-adjusted death rate for Heart Disease for other Maryland counties range from 121.7 to 208.5 per 100,000 population; the state overall is 171.6 per 100,000 population, and the U.S. is at 169.1 per 100,000. While the county's age-adjusted death rate from Heart Disease has improved, it lags behind the state and nation at 185.8 per 100,000 population. From 2008-2010 to 2012-2014, there was a 17.5% decline in age-adjusted death rates for heart disease in the county.

Human Immunodeficiency Virus (HIV)

Overview	
What is it?	HIV is a virus that attacks the body’s immune system and can, over time, destroy the cells that protect us from infections and disease.
Who is affected?	In 2013, 418 residents were diagnosed with HIV, a rate of 56.2 per 100,000 population. The total number of living HIV cases (with or without AIDS) was 6,479. In 2013, 31 residents died from HIV with an age-adjusted death rate of 4.3 per 100,000 population.
Prevention & Treatment	<ul style="list-style-type: none"> • HIV can be prevented by practicing abstinence, limiting the number of sexual partners, never sharing needles, and using condoms the right way during sex. Medications are also available to prevent HIV. (CDC) • There is no cure for HIV but antiretroviral therapy (ART) is available which helps to control the virus so you can live a longer, healthier life and reduce the risk of transmitting HIV to others. (AIDS.gov)
What are the outcomes?	HIV weakens the immune system leading to opportunistic infections (OIs). OIs are the most common cause of death for people with HIV/AIDS and can include <i>Cryptococcus</i> , <i>cytomegalovirus</i> disease, <i>histoplasmosis</i> , <i>tuberculosis</i> , and <i>pneumonia</i> . (AIDS.gov)
Disparity	In 2013, 73% of new HIV cases occurred among men; by race and ethnicity, 85% of new cases were Black non-Hispanic residents. One-third of new HIV cases were ages 20 to 29 years (34%), and 46% were ages 30-49. Nearly 60% of new HIV cases in 2013 occurred among men who have sex with men, compared to Heterosexual exposure for 38% of new cases.
How do we compare?	Prince George’s County had the second highest rate of HIV diagnoses in the state in 2013 (56.2 per 100,000 population) after Baltimore City; however the county had the highest number of actual cases in the state (418, Baltimore City had 385). The rate of HIV diagnoses in other Maryland counties range from 0.0 to 73.6 per 100,000 population. The state overall had a rate of 28.1 per 100,000 population and the U.S. had a rate of 13.4 per 100,000. In 2013, Prince George’s County had 28% of new HIV cases in Maryland, but is only 15% of the total population for the state. New HIV cases in the county have decreased by 12% between 2009 and 2013, while the nearly jurisdictions of Washington, D.C. and Baltimore City decreased by 40%.

Hypertension and Stroke

Overview	
What is it?	High blood pressure, or hypertension, is when the force of blood pumping through the arteries is too strong. Hypertension is a risk factor for stroke, which is when the flow of blood (and thus oxygen) to the brain is blocked.
Who is affected?	In the county, 37.9% (252,160) of adults are estimated to have hypertension (Maryland BRFSS 2013). Among Medicare beneficiaries, 4.6% were treated for stroke in 2014 (CMS). In 2014, 298 county residents died from stroke.
Prevention & Treatment	<ul style="list-style-type: none"> • Hypertension and stroke can be prevented by eating a healthy diet, maintaining a healthy weight, exercising regularly, avoiding stress, and limiting alcohol and tobacco use (source: CDC) • The goal of stroke treatment is to maintain healthy blood pressure through proper nutrition, exercise, and medication (source: American Heart Association).
What are the outcomes?	Complications from hypertension include damage to the heart and coronary arteries, stroke, kidney damage, vision loss, erectile dysfunction, angina, and death. (source: American Heart Association).
Disparity	In 2013, 29.9% of White, non-Hispanic (NH) and 42.6% of Black NH residents are estimated to have hypertension; Black NH residents have the highest age-adjusted Emergency Department visit rate. Slightly more men (38.7%) are estimated to have hypertension than women (37.1%), but women have a higher rate of Emergency Department visits due to hypertension. Both Black NH and White NH have a higher mortality rate due to stroke compared to Asian NH and Hispanic residents. Over 75% of residents aged 65+ and half of adults ages 50 to 64 are estimated to have hypertension (MD BRFSS 2013).
How do we compare?	Other Maryland counties range from 25.8% to 44.6% of residents with hypertension; the county (37.9% with hypertension) is higher than the state at 33.6% (Maryland BRFSS 2013) and the U.S. at 31.4% (BRFSS). The county has a slightly higher age-adjusted death rate due to stroke (37.8 per 100,000) compared to the state (36.9 per 100,000) and U.S (36.5 per 100,000).

Lead Poisoning

Children can be exposed to lead through lead-based paint and dust with lead in it. Although lead paint was banned in 1978 it can be found in homes built before then, and the deterioration of the paint results in the contaminated dust. Lead exposure often occurs without symptoms and can go unrecognized; however, lead can affect nearly every system in the body. There is no safe blood lead level in children, and action is recommended with levels above 5 micrograms per deciliter. Lead poisoning can result in damage to the brain, slowed development and growth, learning and behavior problems, and hearing and speech problems (CDC).

Mental Health

Overview	
What is it?	Mental health includes emotional, psychological, and social well-being. It affects how we think, feel and act. It also helps determine how we handle stress, relate to others, and make choices.
Who is affected?	10.9% (74,502) of residents reported experiencing at least 8 days of poor mental health during the last 30 days (2014 MD BRFSS). In 2014, there were 51 suicide deaths in the county.
Prevention & Treatment	<ul style="list-style-type: none"> • Poor mental health prevention includes helping individuals develop the knowledge, attitudes, and skills they need to make good choices or change harmful behaviors (SAMHSA.gov). • Mental health treatment includes psychotherapy, medication, case management, partial hospitalization programs, support groups, and peer support.
What are the outcomes?	Mental health covers a number of different conditions that can vary in outcomes. Early engagement and support are crucial to improving outcomes.
Disparity	White non-Hispanic residents had a higher Emergency Department (ED) visit rate related to mental health conditions compared to other county residents. The suicide rate was also higher among White non-Hispanics compared to other county residents.
How do we compare?	While 10.9% of county residents reported at least 8 poor mental health days, other Maryland counties range from 6.4% to 24.2%; the state overall is 13.2% (2014 MD BRFSS). The county has the lowest suicide age-adjusted death rate in the state.

Obesity

Overview	
What is it?	Weight that is higher than what is considered a healthy weight for a given height is described as overweight or obese. Body Mass Index (BMI) is used as a screening tool for overweight or obesity that takes into consideration height and weight. Children and adolescents are measured differently based on their age and sex.
Who is affected?	34.2% (218,270) of adults in the county are estimated to be obese, and an additional 34.1% are considered to be overweight. (2014 MD BRFSS). In 2013, 52.6% (310,107) of adults did not meet physical activity recommendations of participating in at least 150 minutes of aerobic physical activity per week. In 2013, 13.7% of high school students were estimated as obese.
Prevention and Treatment	<ul style="list-style-type: none"> • The key to achieving and maintaining a healthy weight is not short-term dietary changes; it's about a lifestyle that includes healthy eating and regular physical activity. (CDC.gov). • Follow a healthy eating plan, focus on portion size, be active, reduce screen time and a sedentary lifestyle, and keep track of your weight (NHLBI.NIH.gov).
What are the outcomes?	Obesity causes an increased risk for hypertension, type 2 diabetes, heart disease, stroke, gallbladder disease, osteoarthritis, sleep apnea and breathing problems, some cancers, low quality of life, and mental illness. (CDC.gov)
Disparity	In the county, more adult females (40.4%) than males (27.5%) are estimated to be obese. By age, more residents age 45 and are obese compared to those under 45 (2014 MD BRFSS). For adolescents, more Hispanic youth were obese compared to other students. More males (50.5%) than females (44.6%) participate in regular physical activity (2013 MD BRFSS).
How do we compare?	While 34.2% of county residents are obese, other Maryland counties range from 20.3% to 49.5%; the state overall is at 29.6% (2014 MD BRFSS) and the U.S. is at 29.5% (BRFSS). 47.4% of county residents met aerobic recommendations, other Maryland counties range from 32% to 55.3%; the state overall is 48% (2014 MD BRFSS) and the U.S. is at 50.6% (BRFSS). More county high school students are estimated to be obese (13.7%) compared to the state (11.0%) (YRBS).

How Obesity Is Classified

Substance Use Disorder

Overview	
What is it?	Substance use disorders occur when the recurrent use of alcohol and/or drugs causes clinically and functionally significant impairment, such as health problems, disability and failure to meet major responsibilities at work, school, or home. (SAMHSA.gov)
Who is affected?	In 2014, 14% of county residents reported binge drinking, and 4.5% indicated they chronically drink. There were 855.6 Emergency Room visits per every 100,000 county residents in 2014. In 2013, 13.3% of adolescents reported using tobacco. Between 2012 and 2014, there were 184 drug-induced deaths in the county of which 123 (67%) were White males.
Prevention & Treatment	<ul style="list-style-type: none"> • Substance use prevention includes helping individuals develop the knowledge, attitudes, and skills they need to make good choices or change harmful behaviors (SAMHSA.gov). • Substance use treatment includes counseling, inpatient and residential treatment, case management, medication, and peer support.
What are the outcomes?	Substance use disorders result in human suffering for the individual consuming alcohol or drugs as well as their family members and friends. Substance use disorders are associated with lost productivity, child abuse and neglect, crime, motor vehicle accidents and premature death (SAMHSA).
Disparity	White non-Hispanic (NH) residents had a higher Emergency Department (ED) visit rate and a much higher drug-induced death rate compared to other county residents. A higher percentage of White NH residents also binge drink compared to other residents. For Adolescents, White NH residents also had a higher percent of tobacco use.
How do we compare?	The county has a lower drug-induced death rate compared to the state. The percent of residents reporting binge drinking for the county is lower than the state.

Violence and Domestic Violence

Overview	
What is it?	Violence affects all stages of life and includes child abuse, elder abuse, sexual violence, homicides, and domestic violence. Domestic violence is a pattern of abusive behavior including willful intimidation, physical assault, battery, and sexual assault used by one partner to gain or maintain power and control over another intimate partner. Domestic violence can happen to anyone regardless of age, economic status, race, religion, sexual orientation, nationality, sex, or educational background (National Coalition Against Domestic Violence).
Who is affected?	There were 4,490 violent crimes (includes homicide, rape, robbery, and aggravated assault) in 2014, and 66 residents in the county died by homicide. (MD Vital Statistics). In 2014, there were 2,083 reports of domestic violence in the county and from July 2014 to June 2015 there were 14 domestic violence-related deaths. (Maryland Network Against Domestic Violence).
Prevention and Treatment	<ul style="list-style-type: none"> • Domestic violence prevention efforts depend on the population and include: <ul style="list-style-type: none"> • Prevent domestic violence before it exists (primary prevention) • Decrease the start of a problem by targeting services to at-risk individuals and addressing risk factors (secondary prevention) • Minimize a problem that is clear evidence and causing harm (tertiary prevention) (Maryland Network Against Domestic Violence).
What are the outcomes?	Apart from deaths and injuries, domestic violence is associated with adverse physical, reproductive, psychological, social, and health behaviors. (CDC.gov).
Disparity	No data is currently available about disparities for violence and domestic violence. However, anyone can experience domestic violence. Women generally experience the highest rates of partner violence compared to males. Teenaged, pregnant, and disabled women are especially at risk. (MD Network Against Domestic Violence).
How do we compare?	The county's homicide rate in 2014 was 7.5; other Maryland counties ranged from 2.2 to 30.6; the state overall is 7.0 and the U.S. is at 5.8 per 100,000 population. The county's violent crime rate in 2013 was 505.6, the third highest in the state with a range from 118.8 to 1,406.4 among other Maryland counties, and the state rate was 467.5 per 100,000. The county ranked as the fifth lowest for the rate of domestic violence in 2014. (MD Governor's Office of Crime Control and Prevention)

KEY INFORMANT INTERVIEWS

Introduction

As part of the 2016 Community Health Needs Assessment conducted in partnership with the county's five hospitals, the Prince George's County Health Department (PGCHD) conducted key informant interviews with 24 County residents drawn from diverse backgrounds with varying perspectives on health in the County. The present report summarizes the approach to the interviews and the findings.

Key Findings

- The three most important health issues facing the County are improving access to primary care, improving access to healthy food, and increasing prevention efforts around chronic disease.
- The most important social determinants of health in the County are (1) lack of transportation; (2) immigration status that renders some residents uninsurable; (3) low health literacy and (4) poverty.
- The three most important barriers relative to the health and well being of residents are (1) limited access to healthcare due to lack of insurance, poverty, provider shortages, lack of transportation, and low health literacy; (2) limited access to healthy foods; and (3) poor adoption of behaviors and activities that promote healthy eating and active living.
- The leading physical health concerns are the incidence and prevalence of chronic disease- cardiovascular disease, hypertension, Type 2 diabetes in adults and Type 2 diabetes and asthma in children.
- The rising incidence of behavioral health problems among adults and children, the stigma around seeking help for mental conditions, and limited access to behavioral health services due to a lack of providers, are three pressing problems in the County.
- Environmental health challenges mainly affect children and are poor air quality that is associated with high rates of asthma and exposure to lead in older housing stock.
- Current health challenges are being addressed through direct services; community health education and outreach; and partnerships and collaborations

but the County needs to develop permanent solutions by allocating funding to expand and strengthen the health safety net and build the capacity of local non-profits to address the health needs of residents.

- Partnerships and collaborations that promote systems of care; the integration of primary and public health services ; and community care coordination hold promise of being effective approaches to tackling serious systemic problems in the County.
- More needs to be done to ensure the cultural and linguistic competency of providers and available services, particularly as they relate to vulnerable sub-populations such as the uninsured, the Piscataway Indians, and recent immigrants and refugees.

Methodology

Sample: PGCHD provided a consultant with the names of 38 individuals who were proposed by the five hospitals and PGCHD. These individuals represented Local government; patient advocates; faith-based organizations; the public school health service; local politicians; safety net providers; state government; physician providers; academia; private industry; local philanthropy and special populations – seniors, Hispanics, the Piscataway Indian tribe; veterans, and the disabled. The representatives live and work in all areas of the County. Of the 38 potential respondents 24 completed the interviews by the deadline set by PGCHD. Notably absent were respondents representing physician providers and academia. Despite repeated contacts representative of these groups did not respond to the request for an interview.

Appendix A presents the list of persons who completed the interviews.

Interview Protocol: PGCHD approved the interview guide (see **Appendix B**) which consisted of 17 open ended questions with related probes. The guide addressed the following main topics- assets and barriers relative to health promotion in the County; opinions on the leading health threats currently facing the County; specific priorities in the areas of physical, behavioral and environmental health; and emerging threats to residents' health.

Implementation: The consultant conducted 20 of the 24 interviews by telephone. Interviews ranged from 30 to 45 minutes in duration and respondents were emailed the questions in advance of the interview. PGCHD extended the option of completing the interview questions in writing to four respondents who were unavailable by telephone

due to scheduling difficulties. All of the interview data were collected between March 10 and 31, 2016.

Analysis: Preliminary content analysis of the interview data occurred at the conclusion of each data collection activity. The consultant identified and recorded first impressions and highlights. The second stage of content analysis identified common categories and overarching themes that emerged as patterns in the data. In the presentation of the interview findings, key patterns are reported along with supportive quotes.

Question-by-Question Analysis

1. *What is your organization/ program's role relative to the health and well being of County residents?*

See **Appendix A** for a list of participants.

2. *How long has your organization/ program played this role?*

As stated earlier the interviewee sample was drawn to reflect various disciplines including local government; patient advocates; faith-based organizations; the public school health service; local politicians; safety net providers; state government; physician providers; academia; private industry; local philanthropy and special populations. Local government agencies represented included the County's health department; social services; family services; public housing; transportation; emergency response; division of aging; planning; and domestic violence and human trafficking prevention services, respectively. Three faith leaders representing the health ministries in their respective organizations also participated as did a representative from the County's Chamber of Commerce. Other respondents included a school health administrator; three safety net providers; five providers serving different special populations; one representative of a local philanthropy; and two local elected officials. These respondents averaged 15.5 years of active service in some aspect of healthcare in the County.

3. *In your opinion has the health of County residents improved, stayed the same, or declined over the past few years? What makes you say that?*

Roughly half (54%, 13) of the respondents believed that over the past few years, residents' health has improved. However, ten of the 13 emphasized that the improvement has been "slight" or "limited". Evidence cited for improvement included: the trend in the health status indicators presented in the County's 2015 Health Report¹; residents' increasing awareness of and demands for prevention information and programming; and increases in the number of residents able to access healthcare due to the provisions of the Affordable Care Act and the County's Health Enterprise Zone. Nevertheless, the observed improvements were restricted, as one respondent voiced **"to persons who are in a position to take advantage of the resources in the County. For various reasons not everyone can do so."** Respondents who felt that residents' health has declined concur with that observation. They noted that a significant proportion² of the population continues to be uninsured, and several were concerned

¹ PGCHD, Office of Assessment and Planning, Health Report 2015

that the health status of the uninsured may not be adequately measured since they tend not to be included in routine surveillance and monitoring efforts. Others pointed to rising incidence of chronic disease (diabetes, hypertension, and cardiovascular disease) in adults and diabetes and asthma among children, as well as the aging of the population as signs of overall health decline. The increasing incidence of untreated behavioral health problems was another indicator cited by some as evidence of declining health.

4. What are the County's three most important assets/strengths relative to the health and well being of residents?

Perhaps due to the highly diverse nature of the sample, this question elicited a very wide range of answers. The most common responses were in descending order of frequency: the County's parks and recreation centers that promote active living; the proposed regional health center that holds promise of increasing residents' access to health care; and the Health Department that has assumed a proactive and collaborative approach to promoting the public's health.

5. What are the County's three most important barriers relative to the health and well being of residents?

In contrast to the variation observed in the responses to the question about the County's assets relative to health, there was a virtual consensus that the three most important barriers are in descending order of frequency cited: limited access to healthcare due to lack of insurance, poverty, provider shortages, lack of transportation, and low health literacy; limited access to healthy foods as evidenced by food deserts in some communities and the ubiquity of fast food restaurants; and poor adoption of behaviors and activities that promote healthy eating and active living.

Access to Care: With respect to access to healthcare, several respondents noted that although the ACA provided many previously uninsured or underinsured residents with insurance, some of these persons cannot afford the monthly premiums and/or co-payments for service. The provider shortage, particularly for primary care and pediatric, behavioral health and oral health services, also creates long waiting lists and effectively means that some residents will not receive needed care in a timely and efficient manner, if ever. While respondents believe that this problem may be redressed somewhat when the proposed regional health center opens, a few individuals pointed to the elimination of maternal and child health services as well as inpatient care at Laurel Regional Hospital and the cessation of PGCHD prenatal services as moves that have further curtailed access to care. In addition, several respondents observed that it is unreasonable to expect the proposed regional center alone to close the gaps in the

County's current frayed safety net. Safety net representatives who were interviewed noted that while their organizations deliver sliding scale services to uninsured residents, ultimately the service model is not viable because in some cases over 30% of all persons seeking care are uninsured. Also symptomatic of the lack of access is the fact that, according to EMS personnel who were interviewed, the fourth most common reason for medical emergency calls in the County is for generic sick patients, i.e. persons with a non-acute problem who lack a medical home and therefore seek care from an emergency department.

Transportation was mentioned so frequently and in relation to so many barriers to health that comments were sought from a manager at the County's Department of Public Works and Transportation, Office of Transportation. According to this individual the County currently provides transportation services to dialysis patients; seniors who eat the County's four senior centers; and the Call-a-Bus service that takes any County resident who is not served by or cannot use existing bus or rail services. However, priority is given to senior and persons with disabilities. The respondent noted that demand for all of these services far outstrips capacity and that would-be riders need to reserve a ride a minimum of two weeks in advance. The manager expressed that augmenting the current fleet of 41 vehicles and 45 drivers with ten (10) additional buses and ten (10) additional drivers would allow meet the present demand during business hours. However, demand is predicted to rise as the population ages. Furthermore, transportation services are not offered after business hours, or on weekends or holidays, and Call-a-Bus is only available between the hours of 8:30 and 3:30.

The lack of culturally and linguistically competent health services is also a barrier to access according to some respondents. This is particularly the case for persons with behavioral health conditions, where provider sensitivity and communication style may greatly influence the treatment intervention. Treatment approaches and/or providers that do not take into consideration patients' health beliefs discourage care seeking and hinder access.

Access to Healthy Food: According to respondents limited access to healthy food caused by food desserts, and the presence of numerous fast food establishments do not support healthy eating. Several respondents cited the closure of major supermarkets; the community's lack of awareness of the produce offered by and the location of local farmers markets; and limited transportation options that prevent residents from traveling to farmers markets or full service supermarkets as ongoing challenges to health. Others noted that the permitting process and other regulations surrounding the opening and operation of farmers markets are much more complicated

than those relative to fast food establishments. Perhaps as a result the fast food restaurant density in the County is .83/1000 residents as opposed to .58 for counties of comparable population and geographic size elsewhere in the country.³ Yet, even when healthy food is accessible some residents do not necessarily access it. According to one respondent **“some family traditions around diet, they just are not healthy. Then culture plays a role. In all of the diverse cultures within the County there are foods that are tasty but bad for you. Unfortunately they are also often the most affordable foods.”**

Personal/Behavioral Factors: Low health literacy and poverty were given as the main reasons for residents' not engaging in healthy eating and active living (HEAL) behaviors. Nearly all (92%, 22) of the respondents mentioned residents' lack of understanding of the importance of HEAL as a major barrier. One respondent observed that the needs of residents with limited or no proficiency in English are not addressed by current community health education efforts. Specifically, the Health Department's website does not provide information in Spanish, the second most commonly spoken language after English in the County, or any other language for that matter. As a result non-English speaking residents often lack accurate information about available resources and how to access them. Even in cases where there is no linguistic barrier, patient advocates report that the lack of coordination among the various health and social services and providers in the County makes navigating the system a challenge for many residents. While the Health Department's efforts to deploy community health workers (CHWs) are welcomed the consensus is that more are needed, with some respondents calling for **“a network of CHWs across the County”** that can raise community awareness of available services and how to access them.

The high cost of living in the County results in a significant number of working poor. These are often residents who work two or more jobs and commute long distances from home. Many struggle to achieve an optimal work–life balance that favors health. The average commute to work for County residents is 41 minutes versus 35 for the rest of the State. Roughly half (57%) of County residents who commute drive alone to work and commute for more than 30 minutes versus 47.2% for the rest of the State.⁴ Roughly one in five (20.5%) of County residents suffer from severe housing problems that include overcrowding, high housing costs, lack of kitchen, or lack of plumbing facilities.⁵ According to several patient advocates, the homeless population (particularly

³ PGCHD PGC Health Zone. Accessed on April 5, 2016 at www.pgchealthzone.org

⁴ Ibid

⁵ Ibid

unaccompanied youth) suffers disproportionately because of their unstable living situation and often present for services in advanced stages of disease.

The parks and recreation centers touted as some of the County's most important health assets may not be readily accessible to some communities. Respondents observed that in fact, some residents in poorer neighborhoods may lack safe outdoor or even indoor space to engage in physical activity. Furthermore due to changes in the school curricula, children in these neighborhoods may not engage in physical education at school.

6. What do you think are the three most important social determinants of health in the County? (Social determinants of health are factors related to the social environment, physical environment, health services, and structural and societal characteristics.)

In descending order of frequency the social determinants that were mentioned were: Lack of transportation (see discussion under Question 5 above), immigration status that renders some residents uninsurable, and low health literacy and poverty tied in third place. A closer analysis of the responses indicate that in fact poverty could be singled out as the key determinant because poverty limits the transportation options such as owning and operating a personal vehicle, affording housing close to public transportation and/or affording the cost of public transportation. Undocumented status is typically a proxy for poverty. However, several interviewees noted that low health literacy has been observed even among the County's significant population of highly educated individuals. In this connection, one respondent observed that the County's low birthweight rate of 9.2%⁶ is high even after controlling for maternal socioeconomic status and urged further study to explore the reasons behind this finding.

7. What do you think are the three most important physical health needs or concerns of County residents?

The incidence and prevalence of chronic disease- cardiovascular disease, hypertension, and Type 2 diabetes in adults and Type 2 diabetes and asthma in children are seen as the leading physical health concerns. The overwhelming majority (88%, 21) of respondents believe that low income residents, uninsured residents, and linguistic minorities are disproportionately affected by these conditions as these tend to be the persons who experience the most difficulty accessing healthcare, for reasons discussed earlier under Question 5. Oral and vision health particularly for the homeless

⁶ Ibid

and for adults is also key concerns as they are typically not covered by basic insurance policies or included in safety net services.

8. What do you think are the three most important behavioral/mental health needs facing the County?

Virtually all (96%, 23) of the respondents expressed that the rising incidence of behavioral health problems among adults and children, the stigma around seeking help for mental conditions, and limited access to behavioral health services due to a lack of providers, are three pressing problems in the County. Respondents noted that substance abuse, depression, anxiety, and suicide provoked by the stresses of long commutes, high cost of living, limited social support, and for some immigrants, feelings of isolation from the greater community are prevalent concerns. Several observed that the County is home to the highest number of veterans in the state and yet veterans remain unaware of or are unwilling to seek mental health services despite the increasing prevalence of post traumatic stress disorder (PTSD) in this sub-population. Family dysfunction including the exposure of children and youth to violence within or outside the home is another contributor to the incidence of mental health conditions. A provider who serves the Hispanic population expressed the view that 60 to 70 percent of all physical problems actually have a root cause in mental health.

Seeking mental health treatment has traditionally been stigmatized in the African American community. A similar pattern is observed in the Hispanic population, whereas the Native American culture has its own approaches to the management of mental health, approaches that mainstream providers may not understand and/or respect. One respondent noted that few of the local faith organizations actively promote care seeking for mental disorders, yet faith organizations are a trusted if not the trusted source of health information, counseling and social support for many residents, particularly those who lack ready access to healthcare. Thus according to one respondent, perhaps a lack of awareness of and/or confidence in the available behavioral health resources may explain why only 7% of all Medicaid beneficiaries in the County access the available services.

When residents do attempt to seek behavioral health care however, they are often confronted by a lack of providers. PGCHD reports that it would like to cease offering direct services in behavioral health but cannot do so until private and safety net provider capacity in this area is significantly enhanced. The majority of behavioral health providers in the County do not accept insurance, necessitating efforts by the PGCHD to make the business case to providers as to why they should do so. EMS staff report that because of the provider shortage only the most acute cases are referred to behavioral

health providers. The rest are taken to the local hospitals that lack inpatient capacity and so end up returning to the community, experiencing another crisis, and entering an endless cycle between the community and under-resourced hospitals. Seniors lack providers trained to address their specific behavioral problems as do children and youth. Housing officials report that seniors with behavioral problems are often incapable of living independently in the community and are therefore at high risk of becoming homeless. As one official stated “**deinstitutionalization means there is nowhere for them to go.**” Another respondent lamented that an entire generation of minority youth is at risk for mental health misdiagnoses because of the lack of pediatric behavioral health providers who are culturally competent. Similar concerns were expressed by respondents who serve recent immigrants and refugees, many of whom have suffered or continue to suffer trauma and different forms of abuse. Immigrant and refugee children in particular are in need of early intervention to detect and address problems proactively. Some attribute the County’s rising incidence of domestic violence to untreated mental health issues.

9. What do you think are the three most important health-related environmental concerns facing the County?

The most commonly mentioned concern (75%, 18) was residential air quality which respondents felt might be responsible for the rising incidence of childhood asthma. Respondents noted that the County has made great strides in reducing exposure to secondhand smoke including the ban on smoking in all public housing which goes into effect on May 1, 2016. However, overcrowded, substandard, poorly maintained housing is said to be responsible for compromised air quality.

Additional concerns relate to lead exposure – a problem in parts of the County with older housing stock. Several respondents reflected that the community, particularly parents of young children, does not seem sufficiently aware of the dangers of lead. Others note that, given the recent, widely publicized problems with water quality in Flint, Michigan, water quality assessments should be conducted, particularly in poor neighborhoods in close proximity to the Anacostia River. Interestingly, none of these respondents was aware that childhood lead levels and water quality measures are both reported on the PGCHD health statistics website – www.pgchealthzone.org.

10. Now if you had to prioritize and select the three most important health issues facing the County from among those you just mentioned what would they be?

The three issues that were most commonly (75%, n=18) mentioned were: improving access to primary care, improving access to healthy food, and increasing prevention

efforts around chronic disease. These issues are seen as intertwined and fueled in large part by poverty, low health literacy and a provider shortage, as discussed earlier. Several respondents expressed the view that the success of the proposed regional health center will be in jeopardy if the County does not address the problem of care for the uninsured. One respondent wondered **“why won’t the regional health center face the same problems as Prince George’s Health Center if it has to treat the same if not a larger volume of uninsured patients? What’s the plan for addressing that before the new center opens?”** Several responses mentioned the need to address super-users: persons who utilize hospital inpatient and emergency services because they either lack a medical home and/or do not practice effective self-management. One respondent estimated that effective management of super-users could save the County upwards of \$6,000,000 annually in reduced healthcare costs. Efforts to expand access also need to be tailored to the specific cultural and linguistic needs of special populations. For example, provider recruitment and professional development should include considerations of cultural and linguistic competency.

Respondents were equally adamant that the County must curtail the proliferation of fast food restaurants and work actively to end food deserts and make farmers markets and full service supermarkets readily accessible to all residents. To this end, several respondents believe that more needs to be done to promote farmers markets including the fact that many accept Supplemental Nutrition Assistance Program (SNAP) and Women Infants and Children (WIC) benefits. Respondents proposed that increased public and private collaboration to raise awareness of available services and resources through social marketing campaigns and enhancing the capacity of faith based and community based organizations would further this goal.

Many respondents appeared to agree with the view that the County **“should make health the center of all its planning- economic development, education, housing, transportation – all should revolve around the health of residents.”** The consensus was that policies that support living wages, expansion of the safety net, and creation of more jobs within the County will reduce poverty and thereby reduce stress and allow residents to focus more on prevention and have the financial and other resources to practice effective preventive behaviors.

11. In what way does your organization/ program address each of the three issues you just mentioned?

Efforts to address the myriad of health problems and concerns raised by the respondents fell into three main categories –direct services; community health education and outreach; and partnerships and collaborations.

Direct Service: All of the direct service providers reported working at capacity and still being unable to meet the demand. Many predict that the demand for services will continue to rise and given the significant proportion of highly educated residents in the County, savvy consumers will increasingly demand high quality services. A few providers mentioned making a concerted effort to hire culturally and linguistically competent staff. All noted that in addition to the provider shortage the non-profit sector particularly in the area of supportive services is very underdeveloped often leaving providers with no referral options. To illustrate the paucity of options, one respondent stated that the County with a population of almost one million has just one domestic violence shelter with approximately 50 beds and a maximum stay of 89 days.

Education and Outreach: FBOs and CBOs were most likely to mention health education and outreach as their response to health issues facing the community. However, several respondents expressed that their organizations need capacity building so that they are better equipped to disseminate the latest information to their constituents. PGCHD has undertaken various countywide health education efforts including one around HEAL and is proposing additional efforts in the area of behavioral health. The Health Department is also using the HEZ as the incubator for its health literacy interventions with the goal of scaling them up countywide over time. EMS continues a practice of providing health education, e.g. the importance of daily blood glucose measurements for diabetics or the need for working smoke detectors in the home, during each resident encounter.

Partnerships and Collaborations: Several respondents praised PGCHD's efforts to form partnerships and collaborations such as the local health action coalition; the Community Care Coordination Team of the HEZ to address various public health issues in the County; the involvement of Maryland-National Capital Park and Planning Commission (MNCPPC) in the County's Primary Healthcare Strategic Plan; and prevention partnerships formed with local hospitals and advocacy groups such as the American Diabetes Association and the American Cancer Society. However, several providers observed that at times the Health Department, safety net providers, and private practices seemed to be in competition for limited resources. Some stated that more needs to be done to ensure that all stakeholders participate fully in various planning functions and that decisions are data-driven. Several respondents noted that the more needs to be done to integrate school health, public health and primary care. The existing four school-based health clinics are considered a step in the right direction but some respondents would like to see the clinics expanded to serve the entire school community including students' families, perhaps through extending current school health resources through the addition of federally qualified health center staff.

Some respondents complained that it is not clear that the results of various needs assessments, such as the present effort, are used to inform policy and programmatic decisions. At times assessment results appear to be deliberately ignored undermining efforts at collaboration. Additionally, several advocated for specialized studies to be conducted on the needs of special populations including but not limited to the Piscataway Indian tribe, the uninsured, the homeless, and recent immigrants as a way of engaging these groups.

12. How well is the County as a whole responding to these issues?

The County, particularly PGCHD, is lauded for its increasing efforts to partner with other public and private agencies, as discussed under Question 11. PGCHD is also seen as leading the effort to design interventions, solutions, and programs that are data-driven and evidence based. Respondents would like to see other County agencies adopt a similar approach as they work in the health arena.

However, overall the County received mixed marks on its efforts to address the various public health challenges raised by the respondents. Some respondents felt that the County faces an uphill battle to counter the negative image of Prince George's that tends to be presented in the media and that discourages economic growth including provider recruitment. Others believe that the battle involves dispelling deeply held personal, cultural beliefs that impact health behaviors and outcomes at the individual level. Another viewpoint is that County leaders do not recognize the interrelationship between economic development and health and as result proposed policies and programs in both areas are not synergistic. County bureaucracy is also seen as a hindrance to innovation and rapid response to identified problems.

Frustrations were voiced that very little has been done to address the following longstanding and well documented problems: access to care for the uninsured; improved transportation services to improve access to care; the proliferation of fast food establishments; adult oral health; and the needs of sub-populations particularly non-English speaking residents and the Piscataway Indians. Some respondents suggested that there may be efforts underway to address the above mentioned problems, but if they are not widely known in the community the resulting impression is that nothing is being done. Others voiced concerns that the Health Department is eliminating some direct service programs and Laurel Regional Hospital is transitioning to become an ambulatory care center in an environment where access to care continues to be limited for significant portions of the population. Again, many expressed doubts that the proposed regional center could completely or even partially correct the problems associated with caring for the uninsured in the absence of dedicated funds to reimburse

these costs. Thus Montgomery Cares is cited as model worthy of emulation in Prince George's County.

13. What more needs to be done and by which organizations/ programs?

As far as the County is concerned promoting service integration across public and private providers and developing systems of care for physical and behavioral health were noted as high priorities by most (75%, n=18) respondents. In this connection, respondents commended PGCHD's efforts around behavioral health. In general, respondents hoped that these efforts will lead to a strengthening of the safety net and address key barriers to care. PGCHD also needs to explore the use of telehealth to stretch the limited provider resources and do a better job of raising community awareness of available resources and how to access them. Additional recommendations for PGCHD include spearheading a more comprehensive but streamlined countywide, health planning process that engages a wide array of stakeholders; increased care coordination efforts; and leveraging the expertise of local academic institutions to ensure that proposed interventions are state of the art and evidence based.

The role of non profits was less clear, however. Respondents expressed the view that more non profits need to be involved in addressing the County's health needs but acknowledged that many lack the capacity to do so. Therefore, a pressing priority is capacity building for non-profits so that more may participate meaningfully in promoting and protecting the health of residents. Capacity building may include technical assistance in board development, grant writing, and program planning, monitoring and evaluation in addition to professional development to ensure that staff is linguistically and culturally competent. It is noteworthy, that respondents did not identify who should deliver the proposed capacity building or how it would be funded.

14. What resources are needed but not available to address each of the three issues?

All except one respondent stated that funding is the missing ingredient and the key resource needed. Respondents commented on the disparity in the funding accorded to health in the County when compared to the funding made available to the health departments of neighboring counties and the District. One respondent stated flatly **"Public health is not a top priority for the leadership of this County. Look at what we spend on health. Look at what Montgomery, Howard even the District spends on health. Look at what we spend on schools, libraries and public safety compared to health. It doesn't compare."** Several respondents observed that a significant proportion of the costs of many essential public health services such as the

safety net, medical transportation, basic primary care, and community behavioral health are covered by grant funding that may be eliminated at any time. In addition, safety net providers are currently unable to be reimbursed by insurers for much of the primary prevention services they offer. Given that the non-profit sector is currently unable to meet the demand for these and other services, this creates a highly unstable environment in which to attempt to promote public health. Another noted that new spirit of partnership and collaboration fostered by the Health Department is leading to innovative ideas but funding is needed to implement them. In the same vein, one respondent affirmed, **“You can’t do great things without good staff and you have to pay good staff.”**

15. What are the 3 most important emerging threats to health and well being in the County?

Only half of the respondents were able to cite any emerging threats. The three most commonly mentioned threats were- effective management of a mass disaster due to natural or terrorist forces; Zika; and the increasing demand for behavioral health services across the population. Several respondents felt that the County has no disaster relief plans or at least has not publicized any plans and residents do not appear cognizant of the threat of a mass disaster and how to respond. Related to this concern is the high probability that an infectious disease like Zika or Ebola could become epidemic in the County. Respondents note that the County is very diverse with residents coming from and traveling to all corners of the globe. One respondent queried **“what’s to prevent an infectious disease from coming to the County and what do we do when it does?”**

One respondent predicted a silver tsunami as the population ages that will result in a growing demand for services related to dementia and Alzheimer’s in addition to those needed by the growing population of veterans returning from stressful combat theaters. PCP addiction, synthetic marijuana use, and electronic cigarettes use, particularly among youth are other behavioral health problems that respondents expect to increase.

16. How is your organization/program addressing these emerging threats?

Respondents uniformly agreed that although they identified threats their organizations are hardly addressing them because they are too occupied with responding to current needs. In addition, some respondents believe that the three threats outlined above require a uniform, comprehensive approach by a County agency and not siloed actions undertaken by individual organizations. The proposed behavioral health system of care is considered to be such a comprehensive approach. Nevertheless, the District Heights

Police Force is poised to unveil a plan for mass evacuation in the event of a disaster. One FQHC has retained an infectious disease specialist to retrain its staff on the latest prevention protocols as they are released by the Department of Health and Mental Hygiene (DHMH). Another provider is offering online mental health screening as well as other mental health services and supports and has joined a workgroup that will be studying dementia in the County. These examples are illustrative of the individual actions taken by local entities to address threats that they have identified.

17. Do you have any other comments to add relative to health and the County?

The bulk of respondents' closing remarks centered on four key recommendations. The County needs to improve access to care by strengthening the safety net; improve health literacy; improve the cultural and linguistic competence of providers and services offered; and ensure stable levels of funding that are commensurate to the size and scope of identified and emerging health needs in the County.

Appendix A: List of Key Informants

NAME	ORGANIZATION	TYPE
Rev. Esther Gordon	First Baptist Church of Glenarden	Faith-based
Karen Bates, RN, MS	PGC Public Schools	School Health
David Harrington	PGC Chamber of Commerce	Business
Cathy Stasny, RD, L.D.	PGC Area Agency on Aging	Seniors
Maria Gomez	Mary's Center	FQHC, Hispanic Population
Melony Griffith	Greater Baden Medical Services.	FQHC

Geralyn Bruce	PGC Department of Public Works and Transportation	Local Government

Appendix B: Community Health Needs Assessment

Key Informant Interview Protocol

1. *What is your/your organization (program's) role relative to the health and well being of County residents?*
2. *How long have you/ your organization/ program played this role?*
3. *In your opinion has the health of County residents improved, stayed the same, or declined over the past few years? What makes you say that?*
4. *What are the County's three most important assets/strengths relative to the health and well being of residents?*
5. *What are the County's three most important barriers relative to the health and well being of residents?*
6. *What do you think are the three most important social determinants of health in the County? (Social determinants of health are factors related to the social environment, physical environment, health services, and structural and societal characteristics.)*
7. *What do you think are the three most important physical health needs or concerns of County residents?*
8. *What do you think are the three most important behavioral/mental health needs facing the County?*
9. *What do you think are the three most important health-related environmental concerns facing the County?*
10. *Now if you had to prioritize and select the three most important health issues facing the County from among those you just mentioned what would they be?*
11. *In what way does your organization/ program address each of the three issues you just mentioned?*
12. *How well is the County as a whole responding to these issues?*
13. *What more needs to be done and by which organizations/ programs?*
14. *What resources are needed but not available to address each of the three issues?*
15. *What are the 3 most important emerging threats to health and well being in the County?*
16. *How is you/ your organization/program addressing these emerging threats?*
17. *Do you have any other comments to add relative to health and the County?*

COMMUNITY-BASED ORGANIZATION SURVEY

Introduction

Prince George's County is diverse; our growing population has a wide range of health needs and disparities. The Community-Based Organization Survey was developed as a strategy that complements the overall Community Health Assessment (CHA) goal of identifying the health needs and issues among the county's different populations, through establishments that work closely with them.

Methodology

The core CHA team provided lists of community-based partners and providers to be included in the survey; this included the membership of the Prince George's County Health Action Coalition, as well as hospital board members, partners, and community leaders. The survey was developed based on existing community surveys, with some modifications specific to the county. Efforts were made to ensure the survey questions corresponded with the Community-At-Large Survey which was also part of CHA data collection efforts. An email request was sent to approximately 250 participants by the Prince George's County Health Officer with an electronic link for the survey on March 4, 2016, with efforts made to resolve missing or incorrect emails. Two reminder requests were sent to those who had not yet participated during the collection period, and the survey closed on March 23, 2016.

The survey questions included multiple choice, ranking, and open-ended responses. Each multiple choice question is presented as a simple descriptive statistic. Questions 4 and 6 both required ranking; each ranked score was weighted in reverse order, with the participants first choice having the largest weight, and their last choice with a weight of one. For Question 4 there were three ranked slots, so a first choice was given a weight of 3; for Question 6 with five ranked slot the first choice was given a weight of 5. An example of how each response was weighted is provided in the table below, with 86 participants total responding to the question:

Rank	Number of Responses	Weight	Response*Weight	Sum of Weighted Responses/Total N
1	4	3	12	$\frac{12+6+2}{86} = 0.23$
2	3	2	6	
3	2	1	2	

Open-ended response questions were initially reviewed for content analysis, which was used to identify common categories and overarching themes that emerged as patterns in the data.

Each response was then reviewed and analyzed according to the categories and themes, with summary responses presented to capture the participants' information.

Participation

Surveys were submitted by 92 participants, with a return rate of 36.8%. All areas of the county were represented by the participants (Question 19), and most ZIP codes had at least one expert participant (Question 20). Participants represented a variety of organizations (Question 18): not-for-profits (32.6%), Healthcare Providers (21.7%), Community Members (17.4%), Government Organizations (16.3%), Faith-Based Organizations (12.0%), and Social Service Organizations (8.7%); participants also worked with a variety of populations in the county (Question 21). Not all participants responded to every question; each question includes the number (N) of participants that did respond.

Key Findings

- **Overall health:** Two-third of respondents indicated Prince George's County to be unhealthy or very unhealthy.
- **Leading health issues:** Chronic disease and related issues including diabetes, obesity/overweight, and heart disease led as the most pressing health issues for the overall county. However, every health issue that was rated had over half of participants indicate it was at least a major or moderate problem in the county.
- **Access to healthcare:** While nearly 60% of participants agreed or somewhat agreed that most residents could access a primary care provider, three-fourths disagreed or somewhat disagreed that county residents are able to access bilingual providers and mental health providers, closely followed by providers accepting Medicaid or other forms of medical assistance. More than half of participants also indicated issues with access to dentists and medical specialists. In addition, open-ended comments noted a lack of "quality" healthcare and providers in the county and that the available services need improvement.
- **Leading barriers:** The leading barriers to care varied by number of responses through the related questions, though the same list of issues was consistently included:
 - Inability to pay for care; those with co-pays could not afford them, and those without insurance could not afford overall care for those without insurance (also cited as a specific issue)
 - Transportation needs outstrip the available services and lack flexibility
 - Knowledge of available services and ability to utilize

- Basic unmet needs, including food insecurity and access to healthy foods (food deserts), transitional and permanent housing, employment, and overall adequate financial resources
 - Access to healthcare providers included lack of primary care, but also included lack of specialists, lack of providers accepting a variety of insurance, and lack of enough hospitals in the county. The open-ended responses also included an overall lack of “quality” and “culturally appropriate” healthcare as a barrier. Lack of dental and behavioral health was also included as a barrier.
 - Lack of insurance, both for those than have not yet applied and for those that do not qualify
 - Cultural/language barriers were noted as an issue especially for immigrants, and affected their ability to access medical care, including basic tasks such as completing forms and enrolling in services.
 - Trust and fear included issues with poor quality care as well as fear for residents who are not U.S. citizens
- **Key resources to access healthcare:** One-third of participants noted a need for health navigation, education, and provision of information to residents as a key resource needed to improve access to care; some participants specified this should be tailored to communities with cultural sensitivity. This was followed by the need for transportation, affordable healthcare, and an increase in primary care and specialists, specifically increasing culturally competent providers located within communities who accept Medicaid and Medicare.
 - **Underserved populations:** The populations that were selected as most underserved included the homeless, the uninsurable, those with low incomes, immigrants, and non-English speaking.
 - **Recommendations to improve health:** Participants echoed the Key Resources needed in this response, with 40% of participants identifying Health Education and Outreach as the leading recommendation, followed by increasing providers and improving access, affordable healthcare, and focusing on building partnerships and increasing funding to organizations that work to improve health.
 - **What is working well:** Participants noted improvement in collaboration and partnerships among healthcare providers, hospitals, health department, and community-based organizations. Programs focused on specific communities and community outreach and education were also viewed positively. Some participants noted that what is working well is often limited by available funding and resources.

Results

Question 1: How would you rate the overall health of Prince George's County? (N=87 responses)

Question 2: Please rate the following health issues for Prince George's County. (N=92 responses)

“Other” Included: lead poisoning; kidney disease; health education disparity; hunger/lack of healthy food/lack of knowledge about healthy foods; residents with comorbidities; young adults lacking employment; pedestrian injury and death

Question 2: Please rate the following health issues for Prince George's County. Major and Moderate Responses

Question 3: Respondents were asked to share any additional information about health issues in the county in an open-ended response (N=21 responses). The responses are summarized in the table below; many responses included statements about multiple issues.

Issues mentioned	Number of Responses	Summary of Responses
Prevention/Addressing Issues	6	Need for prevention and focus on a variety of issues, including: cancer; breast cancer (mortality); crisis pregnancy & abortion; violence (gun); need more HIV prevention (condoms, needle exchange, PREP) and retention in care; dementia/Alzheimer's; heart disease/stroke; hepatitis treatment
Healthy Lifestyle	5	Need to focus on promoting healthy lifestyles; built environment (walkable/bike trails); encourage physical activity; opportunities for exercise are underutilized; county needs to focus more on prevention overall
Healthy Food/Food Desert/Food Security	5	Communities need more healthy food options available to them; too many fast food restaurants; areas of food insecurity impact ability to eat healthy (mentioned south county)
Health Disparities	3	The lower income population with chronic disease issues do not have the resources to address them and lacks access to care; disparity between different health issues needs to have a tailored response to the affected population; immigrant population is difficult to care for; stigma for those with HIV
Health Insurance/Affordable Care	3	Concern for population that are un-and under-insured; inability for many to pay
Providers/Clinics	3	Not enough primary care and specialty providers; need for better access to primary care
Social Determinants of Health/Basic Needs	3	Overall lack of public health infrastructure, education, housing, poverty, crime, disengagement of residents, lack of resources and political will have to be addressed to improve health
Health Education and Campaigns	2	Focus on developing good habits at an early age; hospitals need to be involved in providing education
Hospitals/Acute Care	2	Hospitals need to help address local issues, and need to have services throughout the county within the communities; need for more and better quality healthcare facilities

“Other” Included: multiple tobacco stores opening recently in south county; need for improve the quality and number of mental health programs/providers

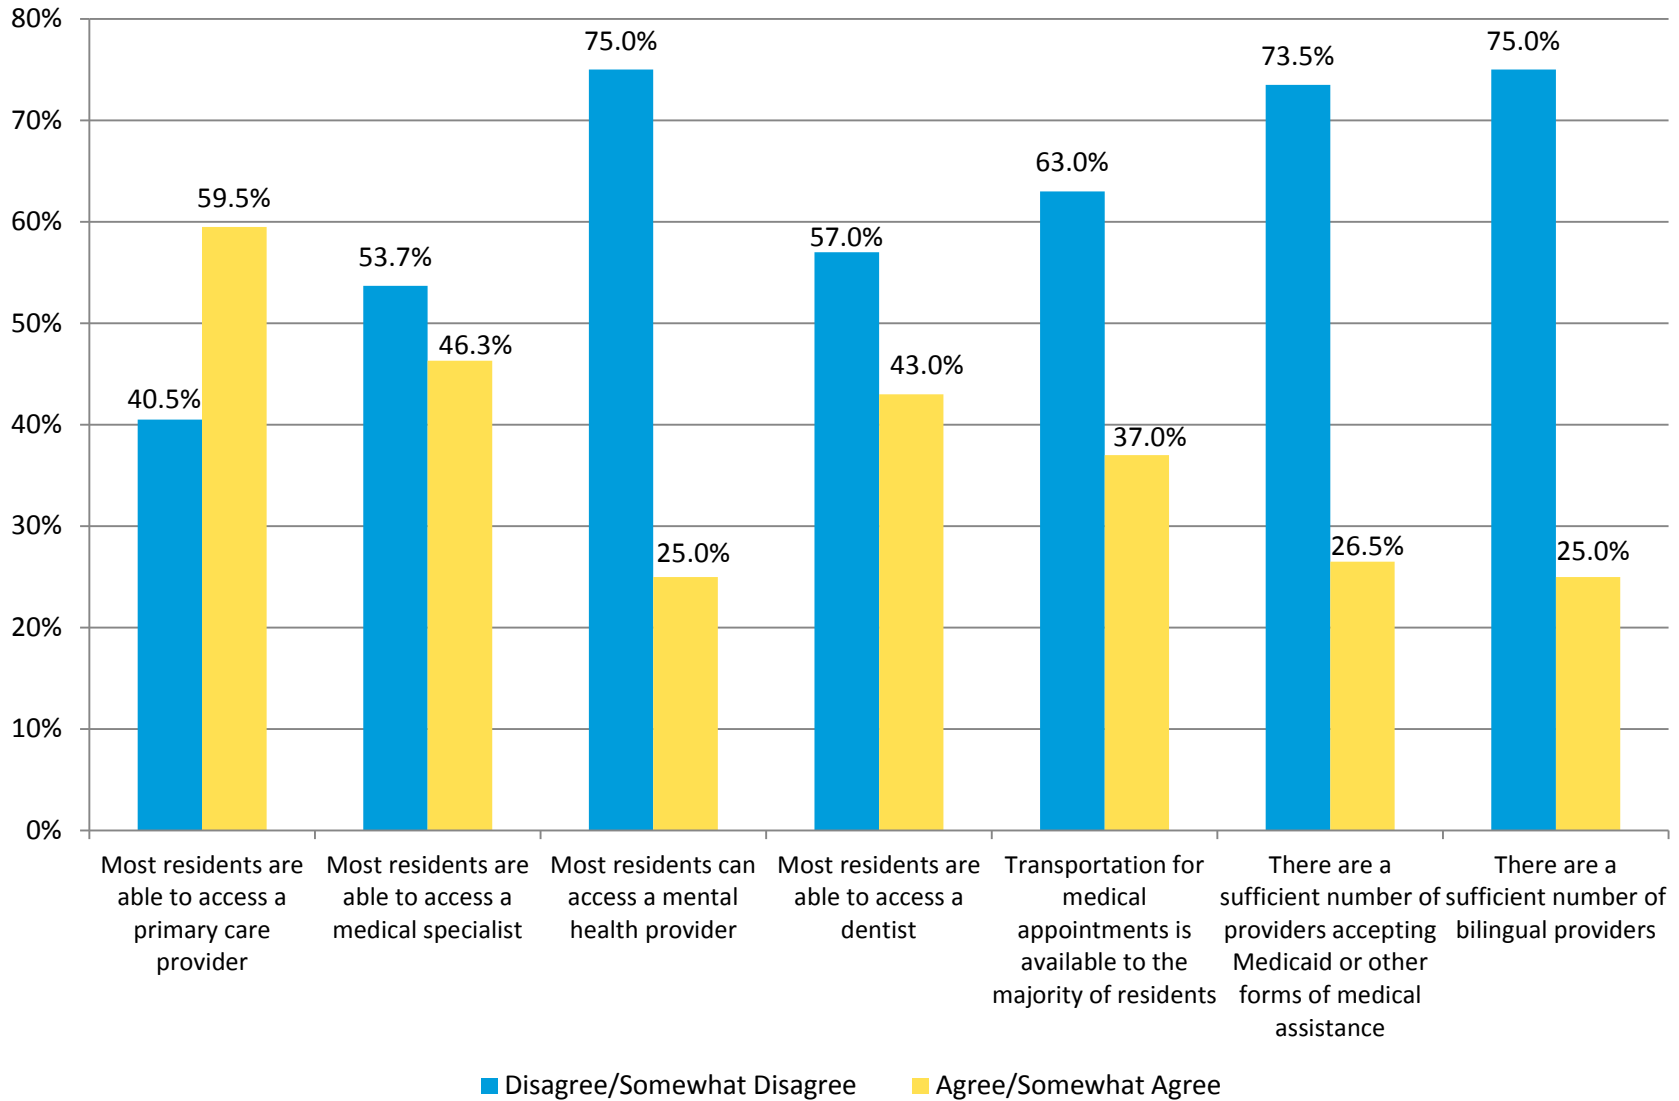

Question 4: From the list for Question 2, please select the three overall most important health issues in Prince George's County. (Shown in order of ranked score) (N=92 responses)

Question 5: Please rate the following statements about health care access in Prince George's County. (N=86 responses)

	Disagree	Somewhat Disagree	Somewhat Agree	Agree
Most residents in are able to access a primary care provider. (N=84)	14 (16.7%)	20 (23.8%)	37 (44.0%)	13 (15.5%)
Most residents are able to access a medical specialist. (N=82)	21 (25.6%)	23 (28.0%)	27 (32.9%)	11 (13.4%)
Most residents can access a mental health provider. (N=84)	32 (38.1%)	31 (36.9%)	17 (20.2%)	4 (4.8%)
Most residents are able to access a dentist. (N=79)	25 (31.6%)	20 (25.3%)	24 (30.4%)	10 (12.7%)
Transportation for medical appointments is available to the majority of residents. (N=81)	13 (16.0%)	38 (46.9%)	22 (27.2%)	8 (9.9%)
There are a sufficient number of providers accepting Medicaid or other forms of medical assistance. (N=68)	19 (27.9%)	31 (45.6%)	12 (17.6%)	6 (8.8%)
There are a sufficient number of bilingual providers. (N=72)	30 (41.7%)	24 (33.3%)	12 (16.7%)	6 (8.3%)

Question 5: Please rate the following statements about health care access in Prince George's County

Question 6: Please rank the top five most significant barriers that keep people in Prince George’s County from accessing health care. (Shown in order of ranked score) (N=86 responses)

“Other” Included: lack of investment in own health; lack of quality providers; fear by undocumented residents, social determinants of health; pattern of using hospital emergency department for regular care

Question 7: Respondents were asked to name two key resources that are needed to improve access to health care for County residents in an open-ended response (N=85 responses). The responses are grouped and summarized in the table below; some responses included statements about multiple issues.

Key Resources	Number of Responses	Summary of Responses
Health navigation, education, and information	28 (32.9%)	Need for: culturally sensitive help in navigating the health care system; health literacy education for consumers; help with using Medicaid and Medicare; community-level engagement
Transportation	18 (21.2%)	Need for: both more and more reliable transportation options; more timely transportation options for handicap population; more options for south county; increased call-a-bus services
Affordable Healthcare	16 (18.8%)	Need for: assistance with co-pays; services that people (even with health insurance) can afford
More Primary Care Providers	14 (16.5%)	Need for: providers who are culturally competent; providers who are physically located in the community; providers who accept Medicaid/Medicare
More Medical Specialists	13 (15.3%)	Need for: providers who accept Medicaid/Medicare; providers who are culturally competent; providers who are physically located in the community; providers who are academically-affiliated; providers specializing in HIV
Health Insurance	11 (12.9%)	Need to: locate and enroll those eligible for insurance; have coverage for those who do not qualify for Obamacare (like Montgomery Cares)
Improved Healthcare Quality	10 (11.8%)	Need for: providers who are diverse, culturally competent, and trained in mental health issues; better quality labor and delivery services; better quality inpatient services
More Behavioral Health Providers	7 (8.2%)	Need for: providers who are culturally competent; providers and support services for behavioral health issues
Location of Medical Providers	6 (7.0%)	Need for: health care centers and services to be located in communities throughout the county; ensure clinic-oriented offices are available for physicians
Better Integration of Services	6 (7.0%)	Need for: culturally competent services; integrated prevention services; need for more one-stop-shops
Basic Needs (Housing, Food, Employment)	5 (5.9%)	Need for: more supportive housing
Dental Care Coverage	4 (4.7%)	Need for: dental coverage for Medicaid; Dental care that covers prevention, extractions, and dentures
More and improved support for FQHCs and community centers	3 (3.5%)	Need for: better support/funding for existing FQHCs and community healthcare centers; increase in the number of FQHC and community healthcare centers in the county
More provider hours	3 (3.5%)	Need for: weekend and evening appointments

Additional Resources mentioned by one respondent: nursing aides, emergency department services, resources for domestic violence, telemedicine, county policies more supportive of health care coverage

Question 8: Respondents were asked to share any additional information about barriers to health care in the county and their selection for Question 7 in an open-ended response (N=25 responses). The responses are summarized in the table below; some responses included statements about multiple barriers.

Barriers	Number of Responses	Summary of Responses
Lack of services tailored to different populations	5	Latinos are second largest group in county but there is a lack bilingual staff; there are difference in access to care by region and ethnicity; services are not tailored to the populations with the most need
Affordable Healthcare	4	Inadequate supply of affordable healthcare and insurance
Service Coordination	4	Lack of coordination to get residents connected with behavioral health services; need for more social/health service coordination; need for consistency across services; more challenging for non-English speaking residents
Providers	4	Lack of quality providers; lack of specialists accepting Medicaid; need to attract health care professionals to the county
Transportation	3	Need for more transportation options; need transportation for seniors;
Housing/Social Determinants	3	Lack of stable housing for low income; lack of transitional housing; lack of resources to improve the social determinants of health

Additional Barriers mentioned by one respondent: lack of resident motivation; lack of knowledge about health priorities in the county by providers/organizations; lack of routine health care access; lack of public health approach to addressing violence; residents with chronic health issues lack education and understanding of their issues

Question 9: Please indicate if you believe the following populations are underserved for health-related services and issues in Prince George’s County. (N listed for each population)

	Very Underserved	Moderately Underserved	Somewhat Underserved	Not Underserved
Homeless Population (N=77)	61 (79.2%)	12 (15.6%)	3 (3.9%)	1 (1.3%)
Uninsurable Population (N=77)	60 (77.9%)	10 (13.0%)	5 (6.5%)	2 (2.6%)
Low Income Individuals (N=83)	46 (55.4%)	29 (34.9%)	5 (6.0%)	3 (3.6)
Immigrant Population (N=69)	36 (52.2%)	21 (30.4%)	10 (14.5%)	2 (2.9%)
Non-English Speaking Population (N=71)	36 (50.7%)	22 (31.0%)	10 (14.1%)	3 (4.2%)

Hispanic/Latino Individuals (N=77)	33 (42.9%)	30 (39.0%)	10 (13.0%)	4 (5.2%)
People with Disabilities (N=66)	23 (34.8%)	20 (30.3%)	16 (24.2%)	7 (10.6%)
Black Individuals (N=80)	26 (32.5%)	25 (31.3%)	25 (31.3%)	4 (5.0%)
Seniors/Elderly (>65 years) (N=81)	21 (25.9%)	26 (32.1%)	24 (29.6%)	10 (12.3%)
Young Adults (18 to 29 years) (N=75)	16 (21.3%)	25 (33.3%)	27 (36.0%)	7 (9.3%)
Young Children (Under 5 years) (N=70)	14 (20.0%)	19 (27.1%)	24 (34.3%)	13 (18.6%)
Children/Youth (5 to 17 years) (N=70)	11 (15.7%)	20 (28.6%)	28 (40.0%)	11 (15.7%)
Adults (30 to 64 years) (N=74)	11 (14.9%)	22 (29.7%)	36 (48.6%)	5 (6.8%)
Asian Individuals (N=58)	5 (8.6%)	12 (20.7%)	24 (41.4%)	17 (29.3%)
Other (N=3)	0	2	0	1

“Other” Included: young children who are part of the immigrant population are very underserved; veterans; the population that lacks health education

Question 9: Please indicate if you believe the following populations are underserved for health-related services and issues in Prince George's County. "Very" and "Moderately Underserved" Responses only.

Question 10: Respondents were asked what the primary barriers are for the populations listed in Question 9 in an open-ended response (N=80 responses). The responses are grouped and summarized in the table below; many responses included statements about multiple issues.

Primary Barriers	Number of Responses	Summary of Responses
Lack of Financial and Basic Resources	36 (45.0%)	For those with insurance, co-pays are too high; For those without insurance, health care is unaffordable; overall basic needs take priority over paying for medical care; lack of computer access
Access to Providers/Healthcare	30 (37.5%)	Providers need to be located within the community and have extended hours, need to provide quality care, and need to be culturally competent; need for more providers overall; need for more providers (including specialists) who see low income patients; need health care that is timely; long wait times on phone or in offices is not feasible due to jobs, limits to time on pre-paid cell phones
Cultural/Language Barriers	21 (26.3%)	Immigrant population are not treated with respect; lack of culturally competent healthcare; lack of diversity in languages spoken
Knowledge About Health and Services	20 (25.0%)	Lack of knowledge about available services increases use of emergency services; education needed about health and screenings
Navigation of Services/ Care Coordination	19 (23.8%)	Vulnerable populations need help connecting to available services; population released from jail/prison; need for healthcare advocates
Transportation	17 (21.3%)	Need for more transportation options
Lack of Insurance	15 (18.8%)	Uninsurable population will continue to have unmet health needs; Insurance is still not affordable for those who do qualify
Community Resources and Outreach	5 (6.25%)	Need for more public-private partnership; need for referral resources; lack of culturally competent community interventions; outreach and focus is not on more vulnerable populations; too much focus on African American population
Lack of Trust	4 (5%)	Fear and trust are a barrier to care
Inadequate Government Funding	2 (2.5%)	Need to serve more non-reimbursable residents

Additional Barriers mentioned by one respondent: immigration status, lack of access to medication

Question 11: Respondents were asked is being done well in Prince George’s County in terms of health and well-being and by whom in an open-ended response (n=77 responses). The responses are grouped and summarized in the table below; many responses included statements about multiple health and wellness activities and contributing organizations.

What is being done well	Number of Responses	Summary of Responses
Collaboration/Partnerships	17 (22.1%)	Seeing more collaboration between health department, healthcare providers, hospitals, and community groups; better care coordination; need to align priorities and strategies and for more sharing of resources for collaborative efforts.
Community-Based Services/Programs	13 (16.9%)	Community-focused programs that provided services within the community were cited as working well, including: mobile units, services being provided at community events, focus on specific communities (Health Enterprise Zone in 20743), programs at nontraditional locations (such as Langley Park MSC, the Salvation Army).
Community Outreach/Education	12 (15.6%)	Increased visibility through community outreach and education efforts; getting information to the public through the media;
Nothing	3 (3.9%)	Respondents did not believe anything is being done well or has improved in the county.

What organizations are doing well for health	Number of Responses	Summary of Responses
Health Department	26 (33.8%)	Planning and bringing community groups and hospitals together for collaboration (Health Action Coalition, care coordination); community-focused programs and strategies; outreach.
Community-based Organizations	16 (20.8%)	Coordination of efforts; outreach; addressing social determinants of health; providing a safety net; taking services to the residents.
Hospitals	15 (19.5%)	Hospitals have increased their efforts, are doing more community programs (outreach, cancer screenings for women, diabetes); new planned hospital; working to get patients into primary care through partnerships.
Clinics/Providers Hospitals	9 (11.7%)	Overall there is better access to care and more providers available; quality of care is improvement; shift to patient centered medical homes; health care at FQHCs and community clinics are viewed as necessary services.
Other	8 (10.4%)	Department of Social Services was noted for health insurance enrollment activities; MNCPP was noted as an active partner for improving county health; efforts by overall County government to improve health and access to care; providing immunizations at schools.

Sixteen responses also included information about needed improvements. The most frequently mentioned was the need for more funding and resources, which was often cited as limiting what could be done well in the county. Also included were: need for better use of funds by the county (decisions driven by politics and “legacy building”); need for more and better funded Community-based organizations; better funding for FQHCs that could also help improve quality of care; addressing policies and laws that negatively affect public health and service provision; residents not knowing about available services, need for better coordination of priorities and of services and resources; wanting more visibility and effort from the health department, community-based organizations, providers, and hospitals, better oversight of funding meant to increase access of affordable care (end result is not always affordable).

Question 12: Respondents were asked what recommendations or suggestions they have to improve health and quality of life in Prince George’s County in an open-ended response (N=78 responses). The responses are grouped and summarized in the table below; many responses included multiple recommendations.

Recommendations	Number of Responses	Summary of Responses
Health Education and Outreach	31 (39.7%)	Tailor campaigns to diverse populations through the county; use a variety of media platforms; focus efforts on vulnerable and low income populations; provide information in a variety of languages
Increase and Improve Access to Providers & Clinics	19 (24.4%)	Improve provider/clinic proximity and hours; ensure providers/clinics are located throughout the county; increase specialists; more school-based healthcare; more specialty clinics (including one for seniors)
Affordable Healthcare	9 (11.5%)	Need assistance with co-pays; need options for uninsurable
Partnerships	9 (11.53%)	Hospitals, Community-based organizations (CBO), Health Department need to work together and share resources; need more care coordination among providers and services; continue to use the Health Action Coalition to address issues; County agencies need to work to strengthen and partner with CBOs
Increase Health Funding	8 (10.3%)	Need funding for resources; invest in citizens’ health; better fund community-based organizations
Basic Needs	8 (10.3%)	Focus on job creation and education; ensure residents have basic needs met such as food and housing; focus on social determinants of health; access to healthy foods
Prevention and Screening	7 (9.0%)	Focus on HIV testing and prevention; work with adolescents (vaccination, work through schools for prevention); encourage exercise; work with employers to improve health of their workers

Recommendations	Number of Responses	Summary of Responses
Hospital Improvement	7 (9.0%)	Need to ensure hospitals are accessible throughout the county; existing hospitals need improved facilities and services to attract residents and physicians; affiliation with academic institutes is a positive; funding needs to be provided for new/improved facilities
Community Engagement	7 (9.0%)	Better engagement of diverse communities and vulnerable populations; better engagement beyond current areas of focus (TNI); work more with community leaders
Support CBOs	6 (7.7%)	Increase and expand CBOs in the county; train and utilize existing CBOs; more funds for CBOs that is not managed through County agencies
Quality Services and Providers	5 (7.7%)	Attract high quality providers; improve service quality; improve mental health services; provide better customer service
Transportation	4 (5.1%)	Increase transportation options; ensure transportation is available on weekends
Policy Changes	3 (3.8%)	Works towards policies for: nutrition labels in restaurants, less fast food restaurants and more access to healthy food, no smoking in public areas, require HPV vaccination, incentives to support quality providers and programs
Behavioral Health Providers	3 (3.8%)	Mental health services and substance use treatment need to be accessible; need more behavioral health services in the county
Community Health Workers (CHW)	2 (2.6%)	Increase CHWs in the communities; focus CHW efforts on residents with high hospital utilization
Data	2 (2.6%)	Collect and use data to inform program and interventions

Additional Key Resources mentioned by one respondent: better built environment; dental care; streamline enrollment process for programs/services (less paperwork); better government management of resources;

Question 13: What do you think could encourage and support more community involvement around health issues in Prince George’s County (select all that apply)? (N=82 responses)

“Other” Included: More involvement of churches and school system; Use of media campaigns in coordination with community and faith-based organizations; incentives to attract mental health and medical specialists to the county; more engagement from providers regarding copayments; county policy around healthcare for contractors; better leadership; more community engagement and more effective outreach; provision of information about available services

Participant Profile

Question 15: What is your gender (N=77 responses)

Question 16: Are you Hispanic or Latino? (N=77 responses)

Question 17: Which one of these groups would you say best represents your race? (N=77 responses)

Question 18: Which of these categories would you say best represents your community affiliation? Participants were asked to select all that apply. (N=77 responses)

“Other” Included: FQHC; public housing; law enforcement; trade union; grant-funded program; resident of the county in addition to their position; mental health provider; academic; non-profit working with health care providers

Question 19: In what geographic part of Prince George’s County are you most knowledgeable about the population? Participants were asked to select all that apply. (N=77 responses)

“Other” included: public housing throughout the county; county areas with a high Latino population

Question 20: What one ZIP Code in the county are you most knowledgeable about for the population (N=74 responses). Eight respondents listed multiple ZIP codes instead.

Question 21: Please select the types of populations you can represent in Prince George’s County through either professional or volunteer roles. Participants were asked to select all that apply. (N=77 responses)

“Other” included: women; victims of domestic violence, undocumented families, and people with mental health and substance abuse issues

Question 22: Respondents were asked what are the most pressing needs of the population they serve based on their experience (N=73 responses). The responses are grouped and summarized in the table below; many responses included multiple needs.

Needs for Service Population	Number of Responses	Summary of Responses
Access to Healthcare	36 (49.0%)	Improve provider/clinic proximity and hours; ensure providers and clinics are located throughout the county; increase specialists; better quality, more affordable, and more timely healthcare; culturally competent (mention of immigrants and LGTB)
Health Education and Outreach	22 (30.1%)	Tailor campaigns to diverse populations through the county (mentioned young black men, elderly, HIV, chronic diseases); promote knowledge about health and about available services; education about nutrition and healthy food; promote exercise
Basic Needs	19 (26.0%)	Focus on job creation and training; housing and transitional housing; ensure residents have basic needs met; financial assistance for basic needs; food security and access to healthy food
Insurance/Co-pay Assistance	12 (16.4%)	Need assistance with co-pays; need options for uninsurable
Navigation/Coordination	11 (15.1%)	Need help navigating healthcare system; help navigating public services; help understanding health insurance and care options
Transportation	7 (9.6%)	Increase transportation options; transportation for disabled and elderly
Behavioral Health Services	5 (6.8%)	Better access to mental health services and substance use treatment; more providers needed
Prevention and Screening	5 (6.8%)	Need more domestic violence prevention efforts; cancer screening; HIV prevention and testing; better overall access to prevention programs/services
General Resources	5 (6.8%)	Need for overall resources
Schools	3 (4.1%)	Need for better (higher quality) public schools
Child Care	2 (2.4%)	Need for child care, especially for single mothers
Language Services	2 (2.4%)	Need for translation services; need for English classes
Medication Assistance	2 (2.4%)	Need help in securing medications

Additional Needs mentioned by one respondent: trust of healthcare system; obesity and related chronic diseases (did not specify what the specific need was); dental care; and senior care.

Question 22: Respondents were asked to share any additional information about the health of Prince George’s County (N=8 responses). The responses are grouped and summarized in the table below; the majority of these responses reiterated information that had already been provided in previous questions.

Additional Information	Number of Responses	Summary of Responses
Collaboration	3	Need for more collaboration among hospitals, physician organizations, government, schools and employers; more collaboration between hospitals and faith-based organizations
Increase in providers/hospitals	2	Need for more providers; need for more hospitals
Better healthcare quality	2	Need for better quality providers; providers receiving public funds need to be held accountable in use of funds, better practice management, and better patient outcomes
Obesity	1	Need to focus on obesity as a cause of many other health issues
Not-for-profits	1	Need a strategy to build capacity of health and social service not-for-profits
Care coordination and information	1	Need for residents to know about and be able to access services
Overall County services	1	Need for better infrastructure ,and better schools
County funding	1	Need for funding to be used for the public instead of politically-motivated projects

Question 24: Would you be interested in becoming more involved in local health initiatives?

COMMUNITY RESIDENT SURVEY

Introduction

Prince George's County is home to over 900,000 residents and growing, with a wide range of health needs and disparities. The Community Resident Survey was a strategy developed to complement the overall Community Health Assessment (CHA) goal of identifying the health needs and issues for the county's diverse population by hearing directly from our residents.

Methodology

The Community Resident Survey was developed based on existing community surveys provided by the CHA core team and examples from successful CHAs with some modifications specific to the county. Efforts were made to ensure the survey questions corresponded with the Community-Based Organization Survey which was also part of CHA data collection efforts. The survey questions included mostly multiple choice and rating scales with a few open-ended responses for demographics and an option for writing in a response if the participant answered with "other".

The survey was translated into Spanish (the most common language spoken in the county after English), and was made available online and through printed copies. Due to time limitations, the survey was distributed as a convenience sample, with each participating hospital requested to help distribute the survey in their service area; two hospitals (Fort Washington Medical Center and Doctors Community Hospital) collected and entered surveys from their service area. The Health Department made the survey available by website, social media, and through provided services. Survey distribution began on March 14, 2016 and ended on April 8, 2016.

For analysis, each multiple choice and rating scale question is presented as a simple descriptive statistic. Because the surveys were collected as a convenience sample, the results were intended as an additional method of gaining community input in support of the overall process, while acknowledging the lack of an adequate sample size to statistically represent the county. Surveys were excluded if the majority of the survey was incomplete or if the participant did not indicate they were a county resident. The English and Spanish surveys were initially analyzed separately with the intent to combine the responses; however, due to notable differences in responses the survey results are presented separately. Each question includes the number (N) of responses.

Participation

Surveys were completed by 201 participants in English and 115 in Spanish for a total of 316 county residents. Nearly all areas of the county were represented by the participants with the exception of the most southern part of the county (a map of representation is available with

Question 13). The demographics of those responding to the survey differ from the overall county: only 46% of the participants were born in the U.S. which is lower than the county, while approximately 75% of the participants were women which is higher than the county. Spanish survey participants were mostly between the ages of 25-44 years, while English survey participants were more evenly distributed by age. Participants indicated a wide range of income and education; over half of the English participants indicated they had a college degree or more, compared to 2% of Spanish survey participants. The majority of Spanish survey participants had an annual income of less than \$50,000.

Key Findings

- **Overall health:** Two-thirds of English survey participants indicated Prince George's County to be healthy or somewhat healthy, as did nearly all Spanish survey participants. Overall most survey participants also indicated their own community to be healthy or somewhat healthy.
- **Leading health issues:** Chronic disease and related issues including diabetes, obesity/overweight, and heart disease led major health problems for the English survey participants, while HIV, diabetes, and cancer led for Spanish survey participants. However, nearly every health issue had over half of the overall participants indicate it was at least a major or moderate problem in the county.
- **Access to healthcare:** Over 60% of English survey participants agreed or somewhat agreed that residents in their community could access a primary care provider and dentist; while 37% indicated that medication cost was a barrier. For the Spanish survey participants, over 30% of participants disagreed or somewhat disagreed that community members could access a primary care provider and dentist, and over half indicated medication costs was a barrier.
- **Leading barriers:** 35% of English survey participants indicated the inability to pay as a major barrier to care in their neighborhood, followed by time limitations (29%) and lack of health insurance (27%). For Spanish survey participants, 66% indicated lack of health insurance was a major barrier to care, followed by inability to pay (44%) and language and cultural barriers (39%).
- **Health Care:** Most of the English survey participants reported having health insurance (84%), and 80% reported seeing a primary care doctor within the last year. However, most of the Spanish survey participants did not have insurance (94%) and only 16% saw a primary care doctor in the past year. Nearly 20% of English survey participants and 27% of Spanish survey participants reported being unable to access needed medical care in the past year due to 1) lack of health insurance, 2) inability to pay, and 3) wait times to get an appointment that were too long.
- **Recommendations to improve health:** Overall, participants recommended increased communication and awareness followed by community-level outreach to encourage and support more community involvement around health issues in Prince George's County.
- **Community Determinants of Health:** For English survey participants, affordable housing was reported as a leading community issue followed by access to good schools and crime. For Spanish survey participants, crime was a leading community issue followed by affordable housing and a good economy.

Results

Question 1: How would you rate the overall health of Prince George's County?
(N=199 English responses; N=115 Spanish responses)

Question 2: How would you rate the overall health of your community?
(N=198 English responses; N=113 Spanish responses)

Question 3: Please rate the following health issues for your neighborhood or community. (N=200 English responses)

“Other” Included: teen violence; hearing; podiatry; vascular; lack of maternity clinic services

Question 3: Please rate the following health issues for your neighborhood or community. (N=109 Spanish responses)

“Other” Included: drug abuse; the overall community’s health

Question 3: Please rate the following health issues for your neighborhood or community. Major and Moderate Responses (N=200 English responses)

Question 3: Please rate the following health issues for your neighborhood or community. Major and Moderate Responses (N=109 Spanish responses)

Question 4: Please rate the following statements about health care access in your community.

	Disagree		Somewhat Disagree		Somewhat Agree		Agree		NA/Don't Know	
	English	Spanish	English	Spanish	English	Spanish	English	Spanish	English	Spanish
Most residents in my community are able to access a primary care provider. (N=200; 113)	11 (5.5%)	29 (25.7%)	17 (8.5%)	13 (11.5%)	55 (27.5%)	15 (13.3%)	76 (38.0%)	19 (16.8%)	41 (20.5%)	37 (32.7%)
There are enough providers in my community for the number of residents. (N=200; 110)	28 (14.0%)	19 (17.3%)	31 (15.5%)	13 (11.8%)	44 (22.0%)	16 (14.6%)	57 (28.5%)	20 (18.2%)	40 (20.0%)	42 (38.2%)
Most residents in my community are able to access a medical specialist such as a dermatologist or neurologist. (N=197; 109)	26 (13.2%)	23 (21.1%)	24 (12.2%)	15 (13.8%)	58 (29.4%)	11 (10.1%)	51 (25.9%)	19 (17.4%)	38 (19.3%)	41 (37.6%)
Most residents in my community can access a mental health provider. (N=200; 110)	25 (12.5%)	20 (18.2%)	36 (18.0%)	16 (14.6%)	43 (21.5%)	10 (9.1%)	49 (24.5%)	16 (14.6%)	47 (23.5%)	48 (43.6%)
Most residents in my community are able to access a dentist. (N=200; 109)	15 (7.5%)	28 (25.7%)	23 (11.5%)	11 (10.1%)	55 (27.5%)	12 (11.0%)	71 (35.5%)	27 (24.8%)	36 (18.0%)	31 (28.4%)
Transportation for medical appointments is available to the majority of residents in my community. (N=199; 108)	17 (8.5%)	20 (18.5%)	30 (15.1%)	11 (10.2%)	54 (27.1%)	16 (14.8%)	53 (26.6%)	15 (13.9%)	45 (22.6%)	46 (42.6%)
The residents in my community can afford their medication. (N=196; 109)	32 (16.3%)	41 (37.6%)	40 (20.4%)	16 (14.7%)	44 (22.5%)	3 (2.8%)	32 (16.3%)	8 (7.3%)	48 (24.5%)	41 (37.6%)

Question 4: Please rate the following statements about health care access in your community. (N=200 English responses).

Question 4: Please rate the following statements about health care access in your community. (N=113 Spanish responses)

Question 5: Please rate if the following barriers keep people in your community from accessing healthcare.
(N=198 English responses)

“Other” Included: lack of quality providers, hospitals, specialists, and dentists in the county; lack of appropriate transportation tailored to meet special health needs; urgent care clinics not accepting Medicare; lack of providers accepting insurance; residents whose insurance coverage lapses; lack of home care to support elderly; lack of personal responsibility for health

Question 5: Please rate if the following barriers keep people in your community from accessing healthcare.
(N=112 Spanish responses)

“Other” Included: “the family”

Question 6: Do you have health insurance? (N=196 English responses, N=100 Spanish responses)

Question 7: Did you see a primary care doctor in the last year? (N=201 responses, N=114 Spanish responses)

Question 8: Has there been a time in the past year when you needed medical care but were not able to get it? (N=201 English responses; N=113 Spanish responses)

Question 9: If you answered that you were unable to get medical care, what prevented you from getting the medical care you needed (select all that apply)? (N=38 English responses; N=27 Spanish responses)

For English participants, “Other” included: green card issues; doctor being fully booked for weeks; lack of quality healthcare in the county; Urgent Care not accepting Medicare; inadequate insurance, not having options close in proximity, and not being able to take time off work. Some participants did not select the items listed, but did include them as barriers in “other”: transportation; co-payment; child care.

For Spanish participants, “Other” included: not having a Social Security Number, no place to go for a health consultation; no insurance and no money to pay for medical care; wait for Cobra enrollment after a job loss.

Question 10: What do you think could encourage and support more community involvement around health issues in Prince George’s County (select all that apply)? (N=196 English responses; N=106 Spanish responses)

For English participants, “Other” included: education on health risks, nutrition, prevention, health lifestyles; starting health education at an early age and tailoring education for culture and age groups; more funding for public health; using a variety of platforms for outreach (TV, radio, local store, schools); increase high quality healthcare providers; community-oriented events and partners; urgent cares that serve all insurance types; providing health-supporting services through schools, such as emergency mental health, immunizations, and access to bilingual providers; providing more education through the hospitals; adequate low income housing; more emphasis on prevention.

For Spanish participants, “Other” included: community-level support; not needing to see a doctor; having insurance.

Question 11: Please rate the following statements about your community.

	Disagree		Somewhat Disagree		Somewhat Agree		Agree		NA/Don't Know	
	English	Spanish	English	Spanish	English	Spanish	English	Spanish	English	Spanish
My community has easy access to fresh foods like fruits and vegetables. (N=199; 108)	16 (8.0%)	18 (16.7%)	19 (9.6%)	18 (16.7%)	51 (25.6%)	22 (20.4%)	103 (51.8%)	34 (31.5%)	10 (5.0%)	16 (14.8%)
My community has places to walk, like sidewalks and parks. (N=199; 113)	15 (7.5%)	24 (21.2%)	21 (10.6%)	10 (8.8%)	39 (19.6%)	19 (16.8%)	120 (60.3%)	54 (47.8%)	4 (2.0%)	6 (5.3%)
My community is safe with little crime. (N=200; 110)	25 (12.5%)	28 (25.4%)	35 (17.5%)	24 (21.8%)	72 (36.0%)	15 (13.6%)	62 (31.0%)	28 (25.4%)	6 (3.0%)	15 (13.6%)
My community has enough affordable housing. (N=200; 110)	46 (23.0%)	24 (27.3%)	47 (23.5%)	21 (19.1%)	50 (25.0%)	17 (15.4%)	41 (20.5%)	18 (16.4%)	16 (8.0%)	30 (21.8%)
My community has access to good schools. (N=199; 109)	35 (17.5%)	21 (19.3%)	28 (14.1%)	17 (15.6%)	65 (32.7%)	23 (21.1%)	60 (30.2%)	38 (34.9%)	11 (5.5%)	10 (9.2%)
My community has a clean environment, such as air and water quality. (N=198; 109)	9 (4.6%)	17 (15.6%)	18 (9.1%)	15 (13.8%)	68 (34.3%)	20 (18.3%)	94 (47.5%)	45 (41.3%)	9 (4.5%)	12 (11.0%)
My community has a good economy. (N=197; 110)	20 (10.2%)	22 (20.0%)	28 (14.2%)	23 (20.9%)	68 (34.5%)	16 (14.5%)	62 (31.5%)	20 (18.2%)	19 (9.6%)	29 (26.4%)

Question 22: How did you receive this survey? (N=197 English responses; N=108 Spanish responses)

For English participants, “Other” included: health clinics; health center, healthcare provider; hospital; medical centers; dentists offices; emergency rooms; health department; immunization center; MD Health Teen Center.

For Spanish participants, “Other” included: the hospital; health clinics; and he health department.

PRIORITIZATION PROCESS

Introduction

Prince George's County conducted the first ever joint Community Health Needs Assessment (CHNA) with a partnership between five local hospitals and the Health Department. This core team began the process of collecting primary and secondary data to describe the residents and health needs in the county. This data was planned to be used during the prioritization process to determine the overall county health priorities. The core team planned for broad community participation for the prioritization process to ensure residents were well represented, with the goal of consensus for shared community priorities. The prioritization meeting took place on April 22, 2016 with 40 participants.

Participants

The Prince George's County Health Department developed a list of prioritization participant roles using the CHNA key informant interviews as a starting point, with additions recommended by the consultant who conducted the interviews and Health Department leadership. Overall, 32 participant roles were recognized as necessary for adequate community representation during the prioritization process. Participants were selected to fill the specified roles as recognized leaders in the community, and each hospital provided representatives for their services area. A list of participant roles, individuals selected to fill those roles, and participation in the prioritization process is included in **Attachment A**. To ensure participation, an invitation and reminders about the meeting were sent by the Prince George's County Health Officer.

Process Summary

To make the best use of a one day prioritization meeting and ensure adequate discussion time for the issues, the core CHNA team selected ten issues to consider during the prioritization meeting using the primary and secondary data collected during the CHNA process:

- Asthma
- Cancer
- Diabetes
- Heart Disease
- HIV
- Hypertension/Stroke
- Mental Health
- Obesity
- Substance Use
- Violence/Domestic Violence

The selection process and issues not selected were presented to the participants, with time for discussion to acknowledge the challenges of these issues that was tracked through a "parking lot".

An agenda for the prioritization process meeting is included in **Attachment B**. The prioritization process began with an overview of the purpose of the CHNA, the steps taken to ensure community input in the process, and a data overview of the ten selected issues (**Attachment C**). The data overview included both the primary and secondary data collected during the CHNA process, as well as an active discussion by the participants who contributed information for the population they represented in their role. The presentation also included a discussion that **any prioritized health issue must include consideration of the social determinants of health, which were acknowledged as a significant factor for health disparity and poor outcomes in the county. The social determinants of health were framed as: Economic Stability, Education, Neighborhood and Built Environment, Social Community Context, and Health and Health Care.**

Each issue was also presented as a handout of the data available (example in **Attachment D**) that included the population affected, known disparities, and how we compare to the state, neighboring jurisdictions, and U.S., where possible. Participants posed questions, provided insight for the population represented, provided anecdotal examples and discussed data limitations, including the lack of data for specific populations, the challenges with obtaining data for services provided in Washington D.C. to our residents, and potential biases in how information such as death certificate and hospital diagnoses are determined, for example.

Prince George's County Health Department hired a consultant, Ribbon Consulting Group (Linda Scruggs and Ebony Johnson) to facilitate the prioritization process. The process was designed around consensus building and ensuring the community representation at the table was heard during the process. The consultants led the group through an initial prioritization with each participant given six stickers (dots). Each of the ten health issues was written on flip chart paper posted in the room, and participants were instructed to place the dots on the issues based on the trend, prevalence, severity of the issue, preventability, and comparison with state and national goals, as well as their knowledge of the county's population; the instructions also specified that up to two dots could be placed on one issue. The dots were counted to determine the top six issues to focus on for the afternoon session.

The initial results were in order by number of "dots":

- | | |
|------------------------|-------------------------------|
| 1) Mental Health | 6) Asthma |
| 2) Diabetes | 7) Cancer |
| 3) Obesity | 8) Violence/Domestic Violence |
| 4) Hypertension/Stroke | 9) HIV |
| 5) Heart Disease | 10) Substance Use Disorder |

The results were reviewed, and the consultant led the group in a discussion about the issues not included in the top six. Participants were then given one additional dot and were instructed to place it on their top priority for the four issues ranked the lowest; this plus the group discussion resulted in cancer and violence/domestic violence being included for prioritization. The consultant then led the group in discussing the reduced list of issues, and

participants were encouraged to share their concerns of the population they were representing.

The final first round results that the group decided to further consider were:

- 1) Mental Health
- 2) Diabetes
- 3) Obesity
- 4) Hypertension/Stroke
- 5) Heart Disease
- 6) Asthma
- 7) Cancer
- 8) Violence/Domestic Violence

Discussion about the priorities focused on how mental health is overarching, and intersects with overall health and an individual's perception and judgment. The group also discussed how many of the top issues were related through a cardio-metabolic lens, and that identifying diseases with common causes and symptoms can help to reduce the collective impact.

In the afternoon session, a second round of prioritization was completed with participants each receiving four dots to place on the remaining issues and instructions that only one dot could be used per issue. The results of this second round were (in order):

- 1) Mental Health
- 2) Obesity
- 3) Diabetes
- 4) Cancer
- 5) Heart Disease

with Hypertension/Stroke, Asthma, and Violence receiving fewer votes. Through the following discussion, participants considered grouping Hypertension/Stroke with Heart Disease as overall cardiovascular health. This led to a further focus on the commonalities between the issues, and came to a consensus of two priority "groups". **The final groupings were agreed upon by nearly all participants, and included:**

- 1) **Behavioral Health:** Mental Health, Substance Use, Domestic Violence/Violence
- 2) **Metabolic Syndrome:** Obesity, Diabetes, Heart Disease, Hypertension/Stroke

The participants also viewed the remaining issues of Cancer, Asthma, and HIV as "stand-alone" issues that would need to be considered individually. The participants reviewed the voting and discussion for these issues, and determined that an additional community priority would be:

- 3) **Cancer**

The overall consensus building process included discussion about the priorities, limitations, and need within the county (included in **Attachment E**). Issues that affected the represented populations that were not included in the prioritization process were also discussed and captured through use of a “parking lot” and by staff taking notes throughout the process.

Parking Lot

Throughout the process, the consultant encouraged participants to document and discuss health issues not included in the prioritization process. These issues included:

- Dental
- Sexually Transmitted Infections
- Maternal and Child Health
- Dementia/Alzheimer’s
- Injury
- Disability
- COPD
- Lead
- Kidneys

The parking lot was discussed and reviewed for clarity and to assess value for the prioritization process. It was determined that some of the parking lot areas would combine into other health areas, and others would be discussed in the future and considered within individual organizations and agencies. Overall, dental health was the issue most discussed, and several participants shared the challenges faced by the residents they serve to obtain dental care.

Conclusion

The participants were asked to continue to represent county residents beyond the prioritization meeting to monitor the progress for the CHNA plans and implementation for the selected priorities, and were asked about the frequency of meetings to review progress. The suggested meeting frequency included:

- Once per year (5 participants)
- 2 Times per year (9 participants)
- 4 Times per year (8 participants)
- Monthly (1 participant)

Overall, participants widely recommended ongoing updates, a focus on preventive care, and continued dialogue, education and coordination of resources and partnerships.

**Prince George's County
Community Health Needs Assessment**

Donna R. Perkins, MPH
Epidemiologist
Prince George's County Health Department
April 22, 2016

Overview

1. **Background**
2. **The CHNA Process**
3. **Prioritization Process**
4. **Social Determinants**
5. **Health Issues**

1. Background:

2011 Local Health Improvement Plan

1. Access to Care

- ACA Capital Connector Entity
- HEZ
- Collaboration with FQHCs/Providers

2. Chronic Diseases with Focus on Obesity

- Be a Part of the Healthy Revolution /HEAL
- On the Road Diabetes Program
- Step It Up initiative

3. Birth Outcomes (Infant Mortality)

- Infant at Risk Program

1. Background:

2011 Local Health Improvement Plan

4. HIV/STI/TB

- Routinizing Testing
- Linkage to care

5. Safe Physical Environments

- Health Impact Assessments
- Pedestrian Injury Education

6. Safe Social Environments

- Overdose Prevention Program
- Safe Neighborhoods Gun Violence Program

1. Background:

- UMD Transforming Health: Public Health Impact Study (2012) focus on healthcare services
- Primary Healthcare Strategic Plan (2015) also focused on healthcare services

2. The CHNA Process

- CHNA are an IRS requirement for hospitals
- CHNA are a requirement for public health accreditation

But most importantly.....

2. The CHNA Process

- It's time: communities and their needs change
- Responsibility to understand the needs of the community we serve
- Shared ownership of the community's health
- Community engagement is critical
- Community partner engagement is critical

2. The CHNA Process: What are the pieces

- Demographics and Population Description
- Health Indicators
- Key Informant Interviews (N=24)
- Community Expert Survey (N=92)
- Community-at-large Survey (N=225 English, N=124 Spanish)
- Resources and Assets Inventory

2. The CHNA Process: What are the pieces

- Prioritization Process
- Implementation
- Monitoring and Evaluation

3. Prioritization Process

- Data-driven
- Representative of the community
- Diverse stakeholder engagement
- Result in comprehensive community priorities
- Used to guide and help implement plans

3. Prioritization Process

Looking at the data:

- Magnitude of the Problem
- Trend
- Severity/consequences
- Perceived Preventability
- National/State Goals
 - HP 2020
 - Maryland SHIP

4. Social Determinants

- Economic Stability
 - Poverty, Employment, Food Security, Housing Stability
- Education
 - High School Graduation, Higher Education, Language and Literacy, Early Childhood and Education Development
- Neighborhood and Build Environment
 - Access to Healthy Foods, Housing Quality, Environmental Considerations, Crime

5. HEALTH ISSUES

Health Issues for Prioritization

- Asthma
- Cancer
- Diabetes
- Heart Disease
- HIV
- Hypertension/Stroke
- Mental Health
- Obesity
- Substance Use
- Violence/Domestic Violence

What Was Not Selected:

- Maternal/Infant Health
- STIs
- Infectious Disease
- Dental Health
- Dementia/Alzheimer's
- Unintentional Injuries
- Disabilities
- Lead Poisoning
- Kidney Disease

Asthma

- 14.3%, or nearly 100,000 of adults are estimated to have asthma (MD 2014 BRFSS)
- 13.9% of children are estimated to have asthma (MD 2013 BRFSS).
- 16.7% of Black, non-Hispanic (NH) adults are estimated to have asthma compared to 10.0% of White, NH adults.
- More females (18.5%) than males (9.6%) are estimated to have asthma

Age-Adjusted Hospitalization Rate due to Pediatric Asthma, 2010-2012

Demographic	Hospitalizations per 100,000 Population <18 Years
Race and Ethnicity	
White, non-Hispanic	5.4
Black or African American	18.5
Asian or Pacific Islander	6.3
American Indian or Alaska Native	33.6
Age Group	
0 to 4 Years	26.9
5 to 9 Years	20.7
10 to 14 Years	9.4
15 to 17 Years	2.9
TOTAL	16.2

Cancer

- In 2011, 3,235 residents were diagnosed with cancer in the county, and the cancer incidence rate was 390.0 per 100,000 residents
- In 2011, men had a much higher cancer incidence rate (475.5) than women (333.1)
- In 2011, Black residents had the highest cancer incidence rate
- In 2014, there were 1,349 deaths from cancer in the county, which accounted for one out of every four deaths

Age-Adjusted Death Rate per 100,000 Population for Cancer

Diabetes

- Estimated 11.5% of adult residents (78,525) and nearly as many with pre-diabetes
- One in three residents over 65 has diabetes
- All community input noted diabetes as a leading issue (or the leading issue) in the county

Age-Adjusted Death Rate per 100,000 Population for Diabetes, 2008-2014

Heart Disease

- Leading mortality rate in the county, and second highest by number (24% of deaths)
- Men have a higher mortality rate than women (233.5 versus 150.9)
- Black non-Hispanic residents have a higher ED Visit Rate for Heart Disease, but White, non-Hispanic residents have a higher mortality rate

Age-Adjusted Death Rate for Heart Disease per 100,000 Population, Prince George's County

HIV

- 418 residents were diagnosed with HIV in 2013, a rate of 56.2 per 100,000.
 - From 2009 to 2013, new cases in Baltimore City and Washington, D.C. fell by 40%; the county only saw a 12% reduction
- 73% of new cases were men
- 85% of new cases were Black, non-Hispanic

2013 New HIV Cases per 100,000 Population, Age 13 and Over

Maryland SHIP
Goal: 26.7

Hypertension and Stroke

- Overall, 37.9% (252,160) of adults are estimated to have hypertension in the county
- Over 75% of residents aged 65+ and nearly half (47.8%) of adults ages 45 to 64 are estimated to have hypertension
- Black, not-Hispanic residents have more than double ED visit rate compared to the next closest group (White, not-Hispanic), but their mortality rate is about the same
- 279 residents died from strokes in 2014

Age-Adjusted Death Rate per 100,000 for Stroke, Prince George's County

Mental Health

- 10.9% (74,502) of residents reported experiencing at least 8 days of poor mental health during the last 30 days (2014 MD BRFSS)
- In 2014, there were 51 suicide deaths in the county.
- White non-Hispanic residents had a higher Emergency Department (ED) visit rate related to mental health conditions compared to other county residents.
- The suicide rate was also higher among White non-Hispanics compared to other county residents.

Age-Adjusted Rate of Emergency Department* Visits per 100,000 Population Related to Mental Health Conditions, 2014

Obesity

- 34.2% (218,270) of adults in the county are estimated to be obese, and an additional 34.1% are considered to be overweight. (2014 MD BRFSS).
- More females (40.4%) than males (27.5%) are estimated to be obese.
- In 2013, 52.6% (310,107) of adults did not meet physical activity recommendations
- In 2013, 13.7% of high school students were considered obese.

Percent of Adults Who Are Obese, 2014 Healthy People 2020 Goal: 30.5%

	Prince George's	Maryland
Overall	34.2%	29.6%
Sex		
Male	27.5%	27.8%
Female	40.4%	31.3%
Race/Ethnicity		
White, non-Hispanic	34.6%	27.9%
Black, non-Hispanic	38.9%	39.1%
Hispanic	20.9%	22.6%
Age Group		
18 to 44 Years	25.9%	25.8%
45 to 64 Years	42.8%	34.8%
Over 65 Years	42.9%	29.0%

Substance Use Disorders

- In 2014, 14% of county residents reported binge drinking, and 4.5% indicated they chronically drink (BRFSS).
- There were 855.6 Emergency Room visits per every 100,000 county residents in 2014.
- In 2013, 13.3% of high school students reported using tobacco.
- White non-Hispanic residents had a higher Emergency Department (ED) visit rate and higher drug-induced death rate compared to other county residents.

Age-Adjusted Drug-Induced Death Rate per 100,000 Population, 2008-2014

Violence/Domestic Violence

- There were 4,490 violent crimes (includes homicide, rape, robbery, and aggravated assault) in 2014, and 66 residents in the county died by homicide. (MD Vital Statistics).
- In 2014, there were 2,083 reports of domestic violence in the county . (Maryland Network Against Domestic Violence).
- From July 2014 to June 2015 there were 14 domestic violence-related deaths. (Maryland Network Against Domestic Violence).

Violent Crime* Rate, 2010 to 2014

Attachment D: Data Summary Example

Cancer

Overview	Prince George's County
What is it?	Cancer is a term used for diseases in which abnormal cells divide without control and can invade other tissues; there are more than 100 kinds of cancer.
Who is affected?	In 2011, 3,235 residents were diagnosed with cancer in the county, and the cancer incidence rate was 390.0 per 100,000 residents. In 2014, there were 1,349 deaths from cancer in the county, which accounted for one out of every four deaths.
Prevention and Treatment	<p>According to the CDC, there are several ways to help prevent cancer:</p> <ul style="list-style-type: none"> • Healthy choices can reduce cancer risk, like avoiding tobacco, limiting alcohol use, protecting your skin from the sun and avoiding indoor tanning, eating a diet rich in fruits and vegetables, keeping a healthy weight, and being physically active. • The human papillomavirus (HPV) vaccine helps prevent most cervical cancers and several other kinds of cancer; the hepatitis B vaccine can lower liver cancer risk. • Screening for cervical and colorectal cancers helps prevent these diseases by finding precancerous lesions so they can be treated before they become cancerous. Screening for cervical, colorectal, and breast cancers also helps find these diseases at an early stage, when treatment works best. <p>Cancer treatment can involve surgery, chemotherapy, radiation therapy, targeted therapy, and immunotherapy.</p>
What are the outcomes?	Remission (no cancer signs or symptoms); long-term treatment and care; death.
Disparity	<p>Overall, men had a higher cancer incidence rate (475.5) than women (333.1), and Black residents had a higher rate (393.4) compared to White and Asian residents in 2011 (Source: 2014 MD Cancer Report). Men also had a higher mortality rate at 197.7 compared to women (143.9), and Black residents had a slightly higher mortality rate (165.7) compared to White residents (161.7).</p> <p>By cancer type, Black residents in the county had higher incidence and mortality rates for breast, colorectal, and prostate cancers.</p>
How do we compare?	Prince George's County 2011 age-adjusted cancer incidence rate was 390.0 per 100,000 residents, much lower than the state at 440.7; other Maryland counties range from 387.4 to 553.7 (2014 MD Cancer Report). The age-adjusted death rate for the county from 2012-2014 was 156.5, compared to Maryland at 162.0 with a range of 121.7 to 208.5 across the counties. The county is similar to the state for cancer screening.
Key Informant Interviews	Cancer was not specifically noted in the interviews.
Community Expert Survey	85% of respondents indicated cancer was a major or moderate issue in the county. Cancer was ranked as the fifth most important health issue.
Community-at-large Survey	66% of English survey participants and 62% of Spanish survey participants indicated cancer is at least a major or moderate problem in the county. Cancer was ranked as one of the top 5 health issues.

Cancer

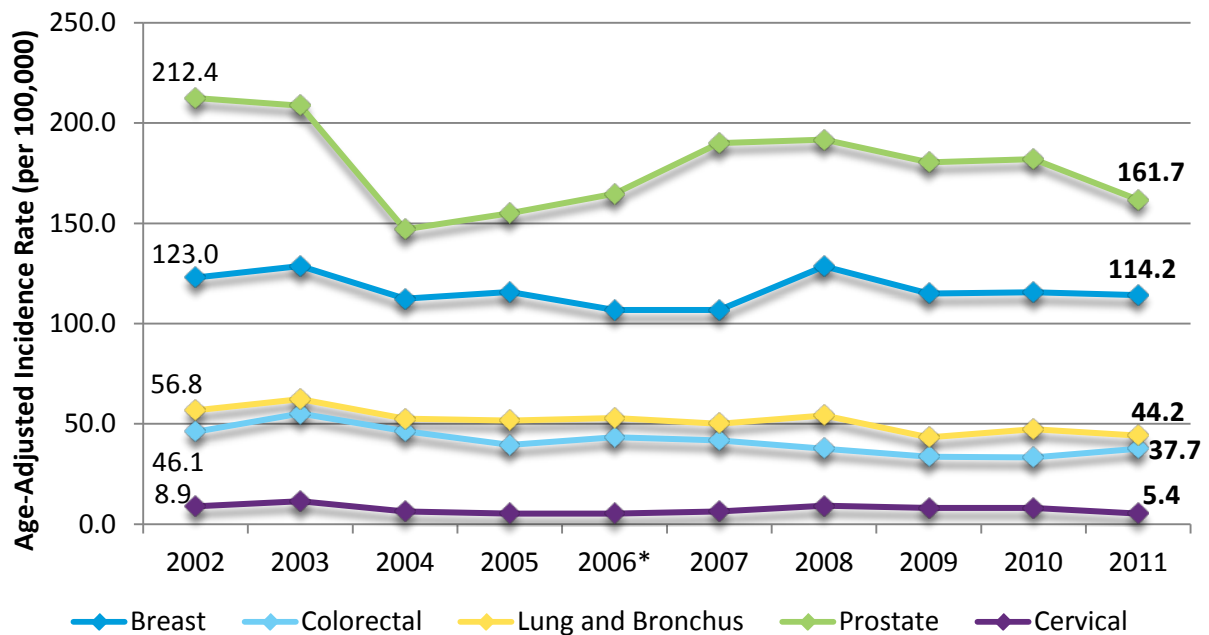

Cancer Age-Adjusted Incidence Rates per 100,000 Population, Prince George's County

Year	All Sites	Breast	Colon	Lung and Bronchus	Prostate	Cervical
2002	435.0	123.0	46.1	56.8	212.4	8.9
2003	463.0	128.7	55.1	62.4	208.7	11.4

Attachment E: Prioritization Process Discussion Notes

Discussion after Data Presentation:

Data Needs and Observations

- Need for data from private providers and community health centers
- Need data from Urgent Care Centers
- Need information on children and health disparities
- Need data about Youth; Youth Risk Behavioral Survey (YRBS) data is not always routinely available (supposed to be collected every other year)
- Demographic designations in data collection tools may vary from the way respondents self-identify, and racial categories are too broad to capture the diversity within the county
- Mental Health data need to be broken into sub-groups. Mental health is too broad to understand all the issues
- Need measures of unmet need and gaps
- Need to look at health trends in children as predictors for health disparities in adults
- White men are most studied, and have the widest and best data sets
- Much current health data reflects deaths rates; need data on living cases across disparities
- Need to track the correlation between HIV and incarceration
- Data doesn't support high use of opioids in the county; PCP usage is high and a problem
- HIV incidence still trends younger in the county, but nationally HIV is becoming more of a problem in the older population

Insight Shared by Participants about their Service Population

- Immigrant communities may be missing from data reporting due to lack of insurance and inability to access health services or ED visits
- Undocumented PG residents may obtain services in DC where there is wider availability of immigrant-centered services
- There is likely a higher rate of women dying from heart disease that is undiagnosed. Many Black women are dying with significant heart damage. However, it is not being listed as the primary cause of death
- There is a lot of people who move in and out of various jurisdictions and seek health services in various settings for varied lengths of time
- Mental health / Suicidal ideations may be overlooked. May manifest with other presentations (self-medication, abuse, etc.)
- Mental illness is cross-cutting issue
- Hard to decouple substance abuse and mental health
- Lot of underreporting of substance abuse
- Many people have many health issues that are undiagnosed

- Culture is a key consideration - For some communities it is perceived as healthy / prosperous to be a bit overweight
- Uninsured is a social determinant that must be considered (approximately 10% of county residents are uninsured)

Additional Discussion

- Diverse communities need to be at the planning tables from the beginning
- Transportation needs to be a part of the equation
- Need more support for FQHC's and private providers to come into PG County

Discussion after Prioritization Round 1:

Discussion about Highest Ranked Issues

- Mental health is tied into perception, judgment
- Mental health was good to be highly selected
- Mental health is overarching. Hard to discuss any other health issues if people are not thinking clearly; votes demonstrate that everyone sees the intersection
- Cardio-metabolic lens. We can identify diseases with common risk factors to try to reduce the collective impact;

Discussion about Lower-ranking Issues (ranked 7-10)

- Violence and Domestic Violence are connected to the entire household, and have long-term and far-reaching effects.
- HIV has potential to be successful with the HIV education and prevention components
- HIV is important because it is connected to STI's
- HIV and substance use are connected to all of the health issues
- Surprise that cancer was rated so low given the data just presented; discussion that cancer may have ranked lower because it already receives a lot of attention

Closing Discussion after Prioritization Round 2:

- We have to treat the *reason* for the illness.
- Any intervention has to be broad enough to have an impact on the issues and the cause
- Obesity and diet impacts the gamut of health

- Keep obesity in the conversation. Can be good for adults and pediatric patients. Discussing obesity can lead to discussions on heart disease, diabetes, hypertension & stroke
- Need data on co-morbidities that occur with the prioritized issues
- Dental needs to be added across clusters (dental impacts cancer, surgery, elderly, maternal health, school)
- Need to address preventable deaths (asthma, suicide)
- Asthma is being treated but underreported

Additional feedback/recommendations received from participants during the day included:

- Using the Public Health Information Network (PHIN)
- Need for expanded funding
- Recommendation to pursue alternative services outside of the criminal justice system to address mental health crisis or substance abuse issues
